### **TECHNICAL MANUAL**

OPERATOR'S AND ORGANIZATIONAL MAINTENANCE MANUAL CONTROL, RADIO SET C-6709/G (NSN 5820-00-930-3597)

This copy is a reprint which includes current pages from Change 1.

HEADQUARTERS, DEPARTMENT OF THE ARMY AUGUST 1979

### WARNING

### **RADIATION HAZARD**

Electrical Surge Arrestors (ESAs), located in rfi filter box A6A1, on the back of the front panel, contain radioactive material. These arrestors are potentially hazardous when broken in large quantities. Consult qualified medical personnel and the Safety Director if you are exposed to broken arrestors. For first aid instructions, see TB 43-0116 and AR 755-15. Be extremely careful when replacing these arrestors and follow safe procedures in their handling, storage, and disposal.

Never place radioactive arrestors in your pocket. Be extremely careful not to break radioactive arrestors while handling them.

Never remove radioactive arrestors from containers until ready to use them.

Refer to TB 43-0116 and AR 755-15 for instructions on handling, storage, and disposal of radioactive material.

### DON'T TAKE CHANCES!

WARNING

Adequate ventilation should be provided while using TRICHLOROTRIFLUOROETHANE. Prolonged breathing of vapor should be avoided. The solvent should not be used near heat or open flame; the products of decomposition are toxic and irritating. Since TRICHLOROTRIUFUOROETHANE dissolves natural oils, prolonged contact with skin should be avoided. When necessary, use gloves which the solvent cannot penetrate. If the solvent is taken internally, consult a physician immediately. CHANGE

**HEADQUARTERS** DEPARTMENT OF THE ARMY Washington, DC, 21 June 1984

### **Operator's and Organizational** Maintenance Manual CONTROL. RADIO SET C-6709/G (NSN 5820-00-930-3597)

TM 11-5820-615-12, 7 August 1979, is changed as follows:

1. New or revised material is indicated by a vertical bar in the margin of the page. Added or revised illustrations are indicated by a vertical bar in front of the figure caption.

2. Remove and insert pages as indicated below.

Remove None i and ii 1-1 through 1-3 2-1 through 2-4 None A-1 B-1 and B-2 C-1 and C-2

Insert C-1 and C-2

3. File this change sheet in front of the publication.

By Order of the Secretary of the Army:

JOHN A. WICKHAM JR. General, United States Army Chief of Staff

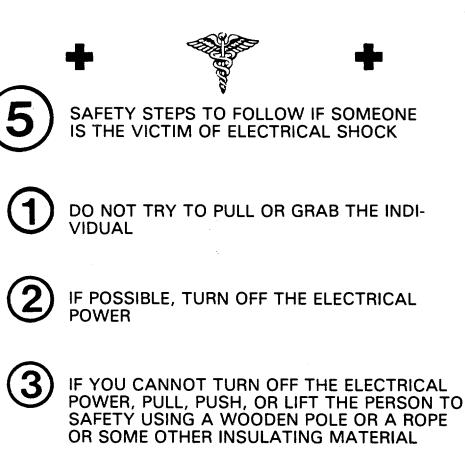

Official:

ROBERT M. JOYCE Major General, United States Army The Adjutant General

**DISTRIBUTION:** 

To be distributed in accordance with DA Form 12-51B, Operator's Maintenance requirements for C-6709.

A/(B blank) i and ii 1-1 through 1-3 (1-4 blank) 2-1 through 2-4 2-4.1/(2-4.2 blank) A-1/(A-2 blank)B-1 and B-2

SEND FOR HELP AS SOON AS POSSIBLE

AFTER THE INJURED PERSON IS FREE OF CON-TACT WITH THE SOURCE OF ELECTRICAL SHOCK, MOVE THE PERSON A SHORT DISTANCE AWAY AND IMMEDIATELY START ARTIFICIAL RESUSCITATION

### **OPERATOR'S AND ORGANIZATIONAL MAINTENANCE MANUAL** FOR CONTROL, RADIO SET C-6709/G (NSN 5820-00-930-3597) Basic manual is current as of April 1979 Change 1 is current as of 3 February 1984

### **REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS**

You can help improve this manual. If you find any mistakes or if you know of a way to improve the procedures, please let us know. Mail your letter, DA Form 2028 (Recommended Changes to Publications and Blank Forms), or DA Form 2028-2 located in the back of this manual direct to: Commander, US Army Communications-Electronics Command and Fort Monmouth, ATTN: DRSEL-ME-MP, Fort Monmouth, New Jersey 07703. In either case, a reply will be furnished direct to you.

### Change 1 ii

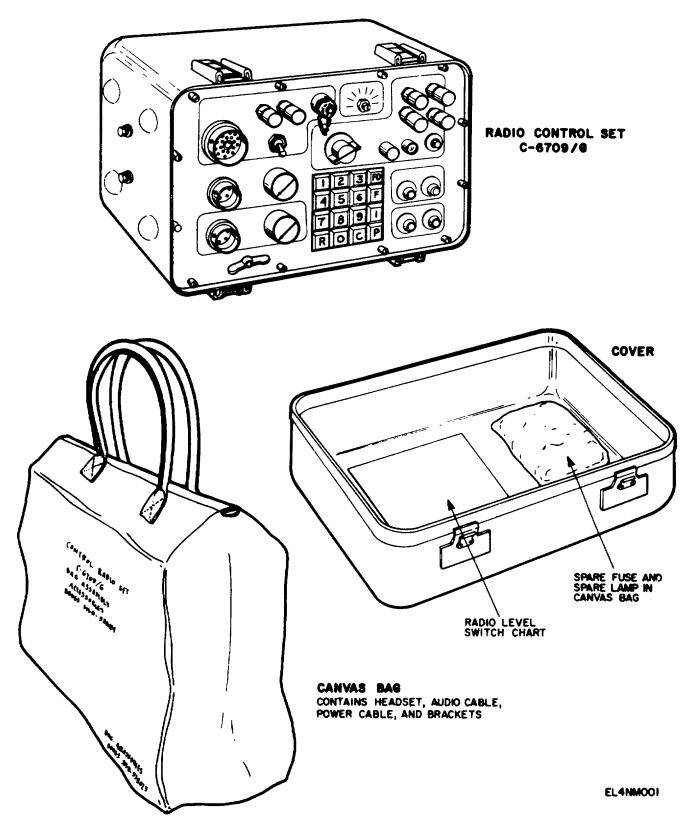

Figure 1-1. Control, Radio Set C-6709/G.

### Section I. GENERAL

### 1-1. Scope

This manual describes Control, Radio Set C-6709/G (fig. 1-1), and covers installation, operation, and maintenance. It includes instructions for all operational modes, and for operator and organizational maintenance.

# 1-2. Consolidated Index of Army Publications and Blank Forms

Refer to the latest issue of DA Pam 310-1 to determine whether there are new editions, changes or additional publications pertaining to the equipment.

1-3. Maintenance Forms, Records, and Reports

a. **Reports of Maintenance and Unsatisfactory Equipment**. Department of the Army forms and procedures used for equipment maintenance will be those prescribed by DA Pam 738-750, as contained in Maintenance Management Update.

b. **Reports of Packaging and Handling Deficiencies.** Fill out and forward SF 364 (Report of Discrepancy (ROD)) as prescribed in AR 735-11-2/DLAR 4140.55/NAVMATINST 4355.73A/AFR 400-54/MCO 4430.3F.

c. Discrepancy in Shipment Report (DISREP) (SF 361). Fill out and forward Discrepancy in Shipment Report (DISREP) (SF 361) as prescribed in AR 55-

38/NAVSUPINST 4610.33C/AFR 75-18/MCO P4610.19D/DLAR 4500.15.

1-4. Destruction of Army Electronics Material

Destruction of Army electronics materiel to prevent enemy use shall be in accordance with TM 750-244-2.

### 1-5. Administrative Storage

Administrative Storage of equipment issued to and used by Army activities will have preventive maintenance performed in accordance with the PMCS charts before storing. When removing the equipment from administrative storage the PMCS should be performed to assure operational readiness. Disassembly and repacking of equipment for shipment or limited storage are covered in paragraph 5-5.

## 1-6. Reporting Equipment Improvement Recommendations (EIR)

If your Control Radio Set C-6709/G needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about your equipment. Let us know why you don't like the design. Put it on an SF 368 (Quality Deficiency Report). Mail it to Commander, US Army Communications-Electronics Command and Fort Monmouth, ATTN: DRSEL-ME-MP, Fort Monmouth, New Jersey 07703. We'll send you a reply.

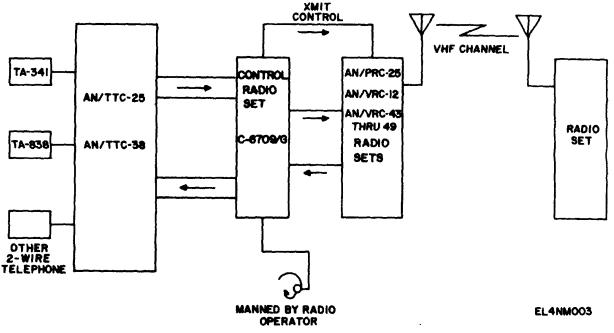

### Section II. DESCRIPTION AND DATA

### 1-7. Purpose and Use

a. The C-6709/G provides an interface between telephone (automatic or manual exchange) equipment

and any one of a number of different radio sets. The C-6709/G is used as a 4-wire termination with a 4-wire switchboard, and a radio set as shown in figure 1-2.

Change 1 1-1

*b.* The C-6709/G is a single, channel, solid-state radio-wire interface. The operator at the C-6709/G receives requests either from the radio link or the switchboard and establishes the interconnection. The C-6709/G can be used with automatic switchboards such as the AN/TTC-38V(\*), and any of the following radio or crypto sets.

AN/URC-93V	AN/VRC-49
AN/SRC-20A	ANPRC-104
AN/SRC-21A	AN/MRC-138
AN/ORC-106	AN/GRC-193
AN/PRC-70	TSEC-KY-65
AN/PRC-77	TSEC-KY-38
AN/VRC-12	SEC-KY-57
AN/VRC-43 through	

### 1-8. Description

The C-6709/G is in a waterproof enclosure with a cover held by four latches. The cover has an air relief valve for equalizing air pressure before opening. All controls and interconnections are on the front panel, which is accessible when the cover is removed. The cover contains a small canvas bag to store a spare lamp and fuse. A separate canvas bag is used to store cables, headset, and two mounting brackets to mount the C-6709/G in a vehicle.

### 1-9. Tabulated Data

Circuit capacity	1 channel
Transmission line impedance	600 ohms

NOTE 1. New brackets for mounting on horizontal surface.

NOTE 2. Used for older style brackets for attaching to vertical surfaces.

### 1-11. Cable Requirements

To connect the C-6709/G to a particular radio or crypto set, refer to table 1-1. This table lists the cable part

numbers and connector designations for radio and crypto sets used with the C-6709/G.

Table 1-1. Cable Requirements

Change 1 1-3/(1-4 blank)

### CHAPTER 2 INSTALLATION INSTRUCTIONS

### 2-1. Checking Unpacked Equipment

*a.* Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on SF 364 (para 1-3 b).

*b.* Check the equipment against the major component listing (par 1-10) and the packing slip to see if the shipment is complete. Report all discrepancies in accordance with paragraph 1-2. The equipment should be placed in service even though a minor assembly or part that does not affect proper functioning is missing.

*c.* Check to see whether the equipment has been modified. (Equipment which has been modified will have the MWO number on the front panel.) Check also to see whether all currently applicable MWO's have been applied. (Current MWO's applicable to the equipment are listed in DA Pam 310-1).

### 2-2. General Installation Instructions

The C-6709/G is completely contained in a single enclosure.

NOTE Before mounting the C-6709/G to any surface, such as that of a vehicle, appropriate authorization should be obtained.

If the C-6709/G is to be vehicle mounted, the mounting brackets provided must be attached to the case.

**2-3.** Tools, Test Equipment, and Materials Required Installation of this equipment must be performed by organizational maintenance personnel. Refer to table 2-1 for tools, test equipment, and materials required for installation but not part of the C-6709/G.

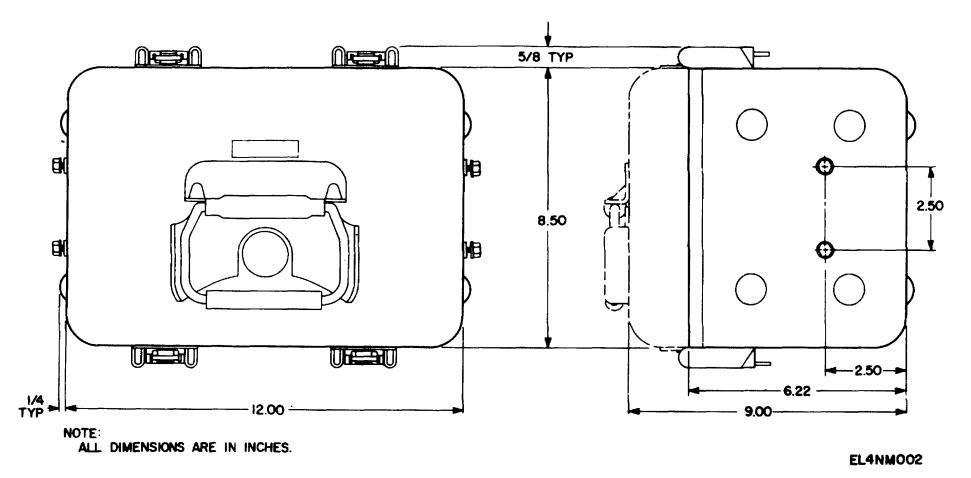

Items	Purpose	Applicable publications
Tool Kit, Electronic Equipment TK-101/G	Installation	SC 5180-91-C1-R13

### Table 2-1. Tools, Test equipment and Materials

\*Used for older style bracket for attaching to vertical surface

\*\*Used for newer style bracket for attaching to horizontal surface

Change 1 2-1

2-2

### 2-4. Installation

*a.* A relief valve is located on the front cover of this equipment. Press the red button to relieve air pressure.

### WARNING The latches are under spring tension. Be careful when releasing them to avoid injury.

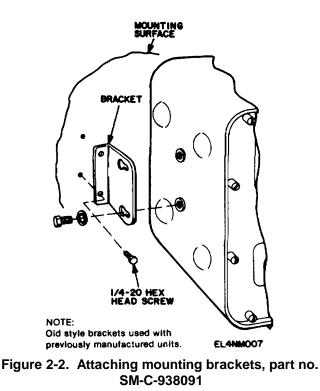

*b.* Remove the front cover by setting the unit on its back, and releasing the four latches.

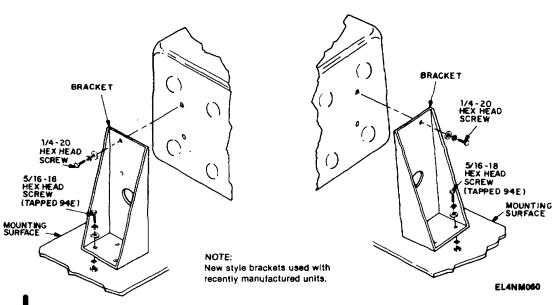

NOTE provide through Steps С g information on installing mounting kit part no. SM-C-938091, figure 2-2. Steps h through k provide information on installing mounting B4014322 and brackets part no. B4014323, figure 2-2.1. Step 1 lists the kit number of the other brackets used for specific installations.

c. Remove the two mounting brackets from the canvas bag.

*d.* Refer to figure 2-2. With a hex wrench from the tool kit, loosen the hex head screws on the sides of the case so that there is about /4 inch between the lockwashers and case.

e. Slip the keyhole slots of the mounting brackets over the screwheads, and push the bracket against the body of the screw. Tighten the screwheads so that the brackets are secure.

Change 1 2-3

f. Locate a mounting area with ¼ -20 tapped holes spaced as shown in figure 2-3. If such holes are not available near the radio set, mounting must be provided either by drilling four #7 holes and tapping with a ¼-20 tap (in metal approximately 3/16,-inch thick), or drilling four 5/16-inch holes in sheet metal and securing the C-6709/G with screws, lockwashers, and nuts. To drill holes, always center punch the exact location before drilling.

*g.* Mount the C-6709/G by means of the screws, lockwashers, and nuts if needed as shown in table 2-1. Use the spin tite, in the toolkit, to tighten the screws.

*h.* Remove the two mounting brackets from the canvas bag.

*i.* Refer to figure 2-2 for bracket mounting on the C-6709/G.

*j.* Locate a mounting area with 5/16-18 tapped holes spaced as shown in figure 2-3.1. If such holes are not available near the radio set, mounting must be provided either by drilling six # F holes and tapping with a 5/16-18 tap (in metal approximately 3-16-inch thick), or drilling six 21/64-inch holes in sheet metal and securing the C-6709/G with screws, lockwashers, and

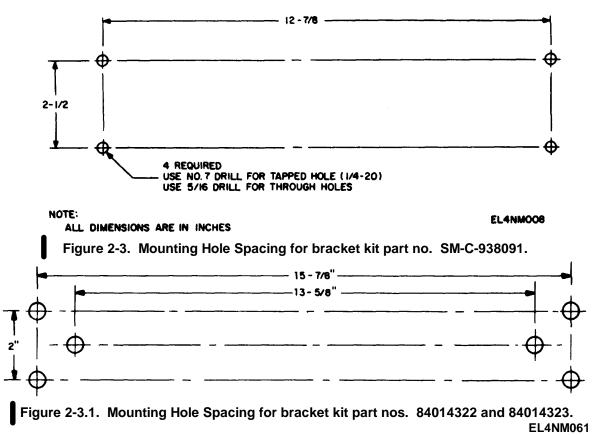

nuts. To drill holes, always center punch the exact location before drilling.

*k.* Mount the C-6709/G by means of the screws, lockwashers, and nuts if needed as shown in table 2-1. Use the spin tite, in the toolkit, to tighten the screws.

*I.* The bracket kit numbers listed in table 2-2 are for mounting bracket used for specific installation.

Table 2-2. Mounting Kits
--------------------------

Kit No.	NSN	Application
MK-2118/VRC	5820-01-145-8508	For M-151 Vehicle Installation
MK-2117/VRC	5820-01-144-5990	For 19 inch Rack Mounting
MK-2118/VRC	5820-01-144-5991	(M-882) For Tracked Vehicle
MK-2245/VRC	5820-01-159-1774	Mounting For 1-¼ Ton Truck M-561

### 2-5. Cable Connections

The C-6709/G is designed to be cable connected to a radio set, and wire connected to a switchboard. Power is obtained either from the radio set, through a power cable, or from an external 24-vdc power supply.

### 2-6. Interconnections

*a.* Remove the cables and headset from canvas bag, and place front cover in bag.

*b.* Install ground wire under wingnut (GND) on front panel. Be sure a proper vehicle connection is obtained. Use WD-I or equivalent wire for connection

### WARNING

Long field wires are subject to lightning strikes. Do not connect or disconnect signal lines during lightning conditions.

c. Set the PWR INT-OFF-EXT toggle switch to OFF.

### CAUTION

Be careful when connecting RADIO SIG and TM11-5820.615-12 HEADSET cable plugs. Both receptacles are identical.

*d.* Connect the RADIO SIG cable plug and HEADSET plug to the respective receptacles on the left side of the front panel.

e. For AN/VRC-12 and AN/VRC-43 through AN/VRC-49 radio sets, insert the INT RADIO PWR cable plug into the large receptacle (upper left corner of panel). Rotate the handle on the plug to lock in place.

### NOTE

### If it is difficult to insert any connector into its receptacle, slightly dampen the O-ring on the inside of the receptacle with water.

*f.* To identify correct receptacles on the radio or crypto sets, refer to paragraph 1-11, then connect cables as indicated.

*g.* Connect the send pair and the receive pair of wires from the 4-wire switchboard to the RED and BLACK binding posts, respectively as shown in figure 2-4.

Change 1 2-4.1/(2-4.2 Blank)

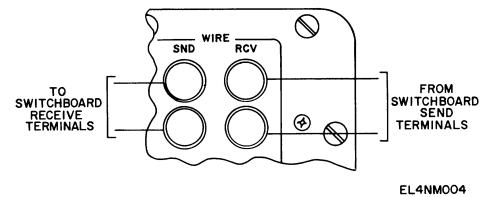

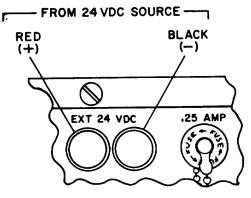

Figure 2-4. Switchboard send and receive wire connections.

*h.* Connect the external power supply (if used) to the screwdriver) to the position indicated in table 2-2, for the EXT 24 Vdc binding posts (negative to (-), positive to (+)) as shown in fig. 2-5. Use standard field wire, WD-1 or equivalent, for connections.

#### EL4NM005

Figure 2-5. External Power Connection.

### 2-7. Preliminary Adjustment

Set the RADIO LEVEL switch (with a flat blade screwdriver) to the position indicated in table 2-2, for the radio set in use. A copy of the table is mounted in the front cover of the equipment.

Table 2.2. Radio	level switch/equipment interface

### 2-8. Preliminary Checks

a. Perform the preliminary checks as shown in table 2-3.

b. Equipment is now ready for operation.

c. Check operation by using normal operating procedures (chap. 3).

### Table 2-3. Installation check procedure

Item	Checks
Ground Wire	Determine that the wire is securely connected to GND terminal on the front panel, and that a proper vehicle
	ground is established. Check continuity to vehicle chassis.
RADIO SIG	Determine that connectors are properly seated in the correct receptacles.
HEAD SET	Determine that connectors are properly seated in the correct receptacles.
INT RADIO PWR (if needed)	Determine that the connector is properly seated in the receptacle, and that the handle is positioned to lock it in place.
SND RCV Wire	Determine that pairs are properly connected to the correct binding posts.
EXT 24 Vdc Wires (if needed)	Determine that wires are properly connected to the binding posts (observe polarity).

### CHAPTER 3 OPERATING INSTRUCTIONS

Section I. OPI	ERATION UNDER USUAL CONDITIONS						
<b>3-1. General</b> The chart in paragraph 3-2 describes the indicators, and connectors on the C-6709/G fro							
Control indicator							
or connector	Function						
Keysender-16 pushbutton	Permits sending dual tone, multiple frequency tones (DTMF) into an automatic switchboard. Permits C-6709/G operator to key radio transmitter on and off.						
.25 AMP fuse	Provides protection to both internal (radio) power supply and external power supply.						
RLSE pushbutton switch	Pressing and releasing pushbutton sends a 2600-Hz release signal until release acknowledge signal is received.						
SVC REQ/BUSY lamp	Indicates service request, and busy/idle status of equipment. Lamp flashes for ser- vice request and lights continuously to indicate a busy condition.						
OPER CONNECT:	Function the experiments are and tolly with an italy and side of light and existence of						
SWBD pushbutton switch	Enables the operator to monitor and talk with switchboard side of link and originate a call to the switchboard.						
RADIO pushbutton switch CALL CONNECT:	Enables the operator to monitor or talk with radio side of link.						
OPER IN pushbutton switch	Enables the operator to connect to talkpath and connect the switchboard to the radio.						
OPER OUT pushbutton switch	Enables operator to remove himself from talkpath and connect the switchboard to the radio.						
Mode (4 position) rotary switch (located above the keysender)	Permits the operator to selector the method of keying the radio transmitter on and off.						
SF/(PTT) single frequency press-to-talk switch	Pressing the PTT button on a digital telephone will key the transmitter on, and when released, will key the transmitter off.						
DTMF 1/3	Permits remote switchboard operator to key the transmitter on by pressing the Of I						
AVOX automatic voice-operated switch	button of his keysender, and key the transmitter off by pressing the 3 button. Transmitter is keyed on when the switchboard subscriber speaks and off when he is						
OPER	silent. When the switch is in this position, the C-6709/G operator keys the transmitter on when he presses the # 1 button of his keysender. The transmitter is keyed off by pressing the 3 button. The operator can override the receiver squelch. When the H-250 handset is used, pressing the PTT button will key the transmitter on, and releasing the PTT button will key the transmitter off.						
INT RADIO PWR receptacle	Connects the dc power cable to the radio set (AN/VRC-12 family).						
CALL ALARM	(left of SVC REQ lamp) Sounds when service is requested, if control is not in OFF position.						
CALL ALARM volume control INT-OFF-EXT toggle switch	Adjust the CALL ALARM sound level from OFF to LOUD. Selects the power source for the C-6709/G.						
INT	In this position the radio set provides the power.						
OFF	In this position, power is OFF, and the unit is inoperative.						
EXI	In this position, power is obtained through two binding posts marked EXT 24 VDC (+) and (-).						
EXT 24 VDC binding posts	Connection for external battery. Battery (+) connects to red binding post and bat- tery (-) connects to black binding post.						
RADIO SIG receptacle	Audio and control signals are fed to the radio set via the interconnecting cable.						
HEAD SET receptacle and volume control	The H-325/TTC headset/microphone cable plug or, if used, the 11-250 handset microphone cable plug, is installed in this receptacle. The control adjusts the headset volume from OFF to LOUD.						
RADIO LEVEL rotary switch	This screwdriver actuated switch matches the C-6709/G to the radio set being used (table 2-2).						
SND RCV binding posts	These binding posts are for connecting to the 4-wire switchboard. The send pair from the switchboard connect to the RCV posts (red). The receive pair from the						
GND terminal	switchboard connects to the SND (black) posts. Attach facility ground wire (earth) to wingnut terminal on the panel.						

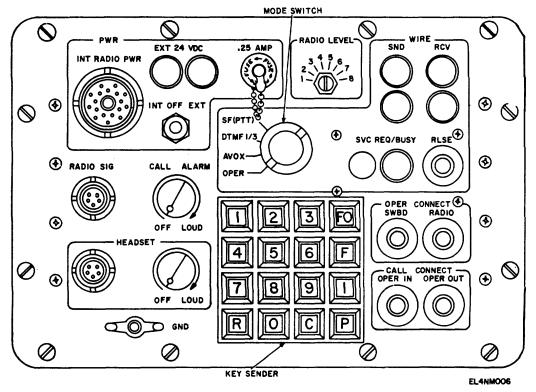

Figure 3-1. Operating controls and indicators.

### 3-3. Preliminary Starting Procedure

a. Set the mode switch in the OPER position.

*b.* Set the INT-OFF-EXT switch as follows: If the INT RADIO PWR cable is connected to the radio set, place the switch in the INT position. If this cable is not connected, place the switch in the EXT position.

*c.* Set the CALL ALARM and HEADSET volume controls to midposition.

### d. Press OPER CONNECT RADIO pushbutton.

### 3-4. Operating Procedures

a. Call Originating From a Switchboard. The C-6709/G operator receives a call indicated by the audible alarm, and flashing SVC REQ/BUSY lamp. The operator presses the OPER CONNECT SWBD button. The SVC REQ/BUSY lamp should stop flashing and remain illuminated. The C-6709/G operator should now obtain the needed information from the switchboard operator such as the party to be called and the type of transmitter control desired. The operator presses the OPER CONNECT RADIO button and sets the radio to the proper frequency. The C-6709/G operator now keys

the radio transmitter to 3-2 ON and OFF by pressing the 1 and 3 buttons, respectively, of his keysender or by the PFIT button on the H-250 handset, if used. After making contact with the radio link, the C-6709/G operator presses the CALL CONNECT IN or OUT button, depending upon whether or not he desires to monitor both sides of the call, and sets the mode switch to the position requested by the switchboard subscriber. This completes the interconnect. When the call is completed, the SVC REQ/BUSY lamp should extinguish. If it does not within a reasonable length of time, the C-6709/G operator should press the CALL CONNECT OPER IN button. If the call is complete, the C-6709/G operator presses the RSLE button, thereby resetting the C-6709/G to receive other calls.

b. Call Originating From a Radio Link. When the C-6709/G operator receives a radio request for a call to be placed to the switchboard, he uses the following procedure:

(1) Press the OPER CONNECT RADIO pushbutton, and rotate the mode switch to the OPER position. The headset and microphone are now disconnected from the switchboard talkpath, and connected to the radio talkpath.

(2) The C-6709/G operator speaks to the radio caller by keying the transmitter on (pressing the 1 button on the keysender). He obtains necessary information such as the called party's number. The # 3 button keys the transmitter off.

(3) The operator presses the OPER CONNECT SWBD button thereby placing his headset in the switchboard talkpath and automatically initiating a seize sequence.

(4) The SVC REQ/BUSY lamp is constantly illuminated.

(5) The C-6709/G operator hears dial tone in his headset, and keys in the number of the called party on his keysender. When the first digit is received by the switchboard, dial tone is stopped. When the last digit has been pressed, ringback tone (interrupted 425 Hz) is heard in the C-6709/G headset.

### NOTE

In case of a misdialed number, press RLSE to initiate a release sequence, then press OPER CONNECT SWBD to initiate a new seize sequence and redial number.

(6) When the called party answers, the C-6709/G operator informs him that he has a radio call,

and to use the # 1 and # 3 buttons on his keysender respectively to key the radio transmitter on and off.

(7) The C-6709/G operator may remove himself from the call by pressing the CALL CONNECT OPER OUT button and setting the mode switch to the desired position.

(8) When the called party hangs up, release is normally automatic, and SVC REQ/BUSY lamp is extinguished. If not, manual release will be necessary.

(9) If under conditions of very high noise level, the radio squelch control prevents operation, the C-6709/G operator should rotate the mode switch to the OPER position, monitor the call, and key the transmitter on and off.

### NOTE

In the OPER position of the mode switch, only the C-6709/G operator can key the radio transmitter on and off.

### 3-5. Standby and Shutdown

*a.* Standby. Whenever calls are not being routed by the C-6709/G, the system is automatically in standby condition.

*b.* Shutdown. Place the INT-OFF-EXT switch in the OFF position. The unit is then completely shut down.

### Section II. OPERATION UNDER UNUSUAL CONDITIONS 0?5

## **3-6. Operation Under Extreme Environmental Conditions**

The C-6709/G is capable of operation under any climatic conditions; however, under extreme conditions the following precautions should be observed:

a. Cold Climates. Extremely low temperatures cause cables to become hard, brittle, and difficult to handle. Avoid kinks which would result in permanent damage. Be sure that all connectors are free of frost, snow, and ice.

*b.* Hot, Dry Climates. Under these conditions, connectors are subject to damage from dust and sand. Do not place open connectors on the ground.

*c.* Hot, Damp Climates. Under these conditions, the equipment is subject to damage from moisture and

fungi. Remove such contaminants with a clean, dry, lint-free cloth.

### 3-7. Operation Under Emergency Conditions

If the C-6709/G is operating with internal (radio set) power and the power cable malfunctions, the C-6709/G may be operated from an external power supply.

*a.* Connect an external 24-vdc power supply to the EXT 24 VDC binding posts, observing polarity (negative (black); positive (red)).

*b.* Place the INT--OFF-EXT switch in the EXT position, and the C-6709/G is ready to operate.

### 4-1. Operator/Crew Tools and Equipment

No special tools are required. Repair parts, tools, test equipment and accessories issued with or authorized for use by the operator for the C-6709/G are listed in the basic issue items list (App B).

4-2. Preventive Maintenance Checks and Services

To insure that the C-6709/G is always ready for operation, it must be inspected periodically so that defects may be discovered and corrected before they result in serious damage or failure. The necessary preventive maintenance checks and services to be performed are listed and described in table 4-1. The item numbers indicate the sequence of minimum inspection requirements. Defects discovered during operation of the unit will be noted for future corrections to be made as soon as operation has ceased. Stop operation immediately if a deficiency is noted which would damage the equipment. Record all deficiencies together with the corrective action taken in accordance with TM 38-750.

### 4-3. Preventive Maintenance Checks and Service Periods

Preventive maintenance checks and services for operating C-6709/G are required as indicated in table 4-1. These checks must be performed during the specified intervals. In addition, the checks shall be performed under the following special conditions:

*a.* When the equipment is initially installed.

*b.* When the equipment is reinstalled after removal for any reason.

*c.* At least once each week if the equipment is maintained in standby condition.

*d.* Perform weekly as well as before operation PMCS if:

(1) You are the assigned operator and have not operated the equipment since the last weekly.

(2) You are operating the equipment item for the first time.

4-4. Cleaning

### WARNING

Adequate ventilation should be provided while usina TRICHLOROTRIFLUOROETHANE. Prolonged breathing of vapor should be avoided. The solvent should not be used near heat or open flame: the products of decomposition are toxic and irritating. Since TRICHLOROTRIFLUOROETHANE dissolves natural oils, prolonged contact with skin should be avoided. When necessary, use gloves which the solvent cannot penetrate. If the solvent is taken internally, consult a physician immediately.

Clean the housing thoroughly with trichlorotrifluoroethane and apply a thin film of silicone on the inside of the housing.

### Table 4-1. Operator/Crew Preventive Maintenance Checks and Services NOTES

If the equipment must be kept in continuous operation, check and service only those items that can be checked and serviced without disturbing operation. Make the complete checks and services when the equipment can be shut down.

ltem	n Interval		Item to be Inspected.	Procedures	Equipment Is Not Ready
No.	В	D			Available If
1	•		Equipment complement	Check for full complement of required corn- ponents.	Power cable or audio cable, head set or microphone are missing.
2	•		Cables	Check for secure cable connections.	
3	•	•	Case and Cover	Remove dirt, dust etc. on exposed surfaces.	
4		•	CALL ALARM volume control	Verify volume control operation.	
5		•	HEADSET volume control	Verify volume control operation.	
6		•	OPER CONNECT SWBD pushbutton	Talk with switchboard side of link.	Operator is unable to connect to switchboard.
7		•	OPER CONNECT RADIO pushbutton	Talk with radio side of link.	Operator is unable to connect to
8		•	CALL CONNECT OPER IN pushbutton	Operator monitors talkpath.	radio link.
9		•	CALL CONNECT OPER OUT pushbut- ton Mode switch	Operator removes himself from talkpath.	
10		•	a. SF (PTT)	Switchboard subscriber keys transmitter on and off with PTT button.	
11		•	b. DTMFI/3	Switchboard subscriber keys transmitter on and off.	
12		•	c. AVOX	Switchboard subscriber keys transmitter on and off with voice.	
13		•	d. OPER	Operator keys transmitter with keysender	Operator is unable to key

Within designated interval, these checks are to be performed in the order listed.

		_		Available If	
14 15 16 17		•	e. OPER Keysender RLSE pushbutton SVC-REQ/BUSY lamp	buttons I and 3. Operator keys transmitter with the H-250 handset PTT button. Check for DTMF tones sent to switchboard. Operator terminates a call. Check that lamp flashes when call is re- quested.	transmitter in OPER mode. Operator is unable to key transmitter in OPER mode.

### 4-5. Troubleshooting

a. The operator troubleshooting is limited to replacement of the fuse or the SERV REQ/BUSY lamp. If equipment is completely inoperative, the operator can change the fuse to check for failure due to blown fuse. The failure of the SERV REQ/BUSY lamp will be indicated by receipt of an audible alarm indicating a service request but no illumination of the SERV REQ/BUSY lamp. The operator should first insure that the lamp dimmer has not been turned preventing illumination. Spare lamp and fuse are stored in the small canvas bag in the cover.

*b.* Any trouble that is beyond the scope of operator/crew shall be referred to organizational maintenance.

### 4-6. Maintenance of Control, Radio Set C-6709/G

The operator/crew shall replace a blown fuse or a faulty SERV REQ/BUSY lamp. Replace lamp and fuses as follows:

a. Replacing Lamp

(1) Place EXT-OFF-INT switch in OFF position.

(2) Turn lens cap counterclockwise and remove it from the panel.

- (3) Remove lamp from lens cap.
- (4) Insert and seat new lamp.
- (5) Reinstall lens cap.

(6) Return EXT-OFF-INT switch to EXT or INT position as applicable.

b. Replacing Fuse

(1) Place EXT-OFF-INT switch in OFF position.

(2) Turn fuse cap counterclockwise and remove it from panel.

(3) Remove blown fuse from fuseholder by pulling straight out.

(4) Insert new fuse into fuseholder.

(5) Reinstall fuseholder cap by rotating clockwise to secure.

(6) Return EXT-OFF-INT switch to EXT or INT as applicable.

4-2

### CHAPTER 5 ORGANIZATIONAL MAINTENANCE INSTRUCTIONS

### 5-1. Organizational Tools and Equipment

The tools and equipment needed for organizational maintenance are listed in (IM 11-5805-615-20P). The maintenance allocation chart is in appendix D.

### 5-2. Repainting and Refinishing Instructions CAUTION

Before painting, carefully mask all unpainted and vented surfaces and nameplates, decals, MWO information, and other markings.

*a.* The final paint film of both the front panel and the case is smooth, semigloss enamel, dark green color number 24087, conforming to FED-STD-595 as listed in SB 11-573. The finish for handles, hinges, screws, etc, is in accordance with MIL-F-14072.

*b.* Refer to TB 43-0118 for instructions on painting and preserving electronic equipment.

# 5-3. Organizational Preventive Maintenance Checks and Services

Organizational preventive maintenance should be performed at quarterly intervals in accordance with table 5-1.

### NOTE

If the equipment must be kept in continuous operation, check and service only those items that can be checked and serviced without disturbina operation: make the complete when the services equipment can be shut down. Check external power source for 24 vdc minimum before reporting defective items higher to category maintenance personnel.

### Table 5-1. Organizational Preventive Maintenance Checks and Services Quarterly Schedule

Item No.	Item To Be Inspected	Procedures
1	External surfaces	Check external surfaces for corrosion, moisture, mildew, dirt, grease, etc., clean as required.
2	Cover	Check cover and gasket for tears, cuts, and breaks.
3	Mounting	Check for loose screws and, mounting hardware.
4	Wiring and cables	Inspect cables for abrasions and broken or loose connections
5	Preservation	Inspect for rust and corrosion. Refinish as required.

### 5-4. Organizational Troubleshooting

Organizational troubleshooting is limited to replacement

of fuses, lamp, cables and headset. Refer to table 5-2 for organizational troubleshooting.

	Malfunction	Probable cause	Corrective action
1	No communication possible with power tog-	Defective .25 AMP fuse.	Replace fuse.
	gle switch in either INT or EXT position		
2	Operates only on EXT power	Defective INT RADIO PWR cable.	Replace cable.
3	Does not operate with EXT batteries	Defective batteries or connecting wires.	Replace batteries or wires as needed.
4	Operates in SWBD mode, but not in RADIO mode	Defective RADIO SIG cable.	Replace cable.
5	Operation normal, but SVC REQ/BUSY lamp does not light	Defective lamp.	Replace lamp.
6	Switchboard and radio audio not present in headset	Headset defective.	Replace headset.

### Table 5-2. Organizational Troubleshooting

Before placing the C-6709/G in storage, inspect it for completeness and appearance. Also, check to be sure that it meets all operational requirements.

*a.* Perform the operator/crew preventive maintenance checks and services (table 4-1).

*b.* Perform the organizational maintenance checks and services (table 5-1).

### APPENDIX B COMPONENTS OF END ITEM LIST

### Section I. INTRODUCTION

### B-1. Scope

This appendix lists integral components of and basic issue items for the C-6709/G to help you inventory items required for safe and efficient operation.

### B-2. General

This Components of End Item List is divided into the following sections:

a. Section II. Integral components of the End Item. These items, when assembled, comprise the C-6709/G and must accompany it whenever it is transferred or turned in. The illustrations will help you identify these items.

b. Section III. Basic Issue Items. These are the minimum essential items required to place the C-6709/G in operation, to operate it, and to perform emergency repairs. Although shipped separately packed they must accompany the C-6709/G during operation and whenever it is transferred between accountable officers. The illustrations will assist you with hard-to-identify items. This manual is your authority to requisition replacement BII, based on TOE/MTOE authorization of the end item.

### **B-3. Explanation of Columns**

a. Illustration. This column is divided as follows:

(1) Figure number. Indicates the figure number of the illustration on which the item is shown.

(2) Item number. The number used to identify item called out in the illustration.

*b.* National Stock Number. Indicates the National stock number assigned to the item and which will be used for requisitioning.

*c.* Part Number. Indicates the primary number used by the manufacturer, which controls the design and characteristics of the item by means of its engineering

drawings, specifications, standards, and inspection requirements to identify an item or range of items. Following the part number, the Federal Supply Code for Manufacturers (FSCM) is shown in parentheses.

*d.* Description. Indicates the Federal item name and, if required, a minimum description to identify the item.

e. Location. The physical location of each item listed is given in this column. The lists are designed to inventory all items in one area of the major item before moving on to an adjacent area.

f: Usable on Code. Not applicable.

*g.* Quantity Required (Qty Reqd). This column lists the quantity of each item required for a complete major item.

*h.* Quantity. This column is left blank for use during an inventory. Under the Rcvd column, list the quantity you actually receive on your major item. The Date columns are for your use when you inventory the major item at a later date; such as for shipment to another site.

### **B-4.** Special Information

National stock numbers (NSN's) that are missing from P source coded items have been applied for and will be added to this TM by future change/revision when they are entered in the Army Master Data File (AMDF). Until the NSN's are established and published, submit exception requisitions to: Communications and Electronics Materiel Readiness Command, ATTN: DRSEL-MM, Fort Monmouth, New Jersey 07703 for the part required to support your equipment.

### APPENDIX C ADDITIONAL AUTHORIZATION LIST Section I. INTRODUCTION

### C-1. Scope

This appendix lists additional items you are authorized for the support of the C-6709/G.

### C-2. General

This list identifies items that do not have to accompany the C-6709/G and that do not have to be turned in with

it. These items are all authorized to you by CTA, MTOE, TDA, or JTA.

### C-3. Explanation of Listing

National stock numbers, descriptions, and quantities are provided to help you identify and request the additional items you require to support this equipment.

(Next printed page is C-2)

### APPENDIX D MAINTENANCE ALLOCATION

### Section I. INTRODUCTION

### D-1. General

This appendix provides a summary of the maintenance operations for the C-6709/G. It authorizes categories of maintenance for specific maintenance functions on repairable items and components and the tools and equipment required to perform each function. This appendix may be used as an aid in planning maintenance operations.

### **D-2.** Maintenance Function

Maintenance functions will be limited to and defined as follows:

*a. Inspect.* To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination.

*b. Test.* To verify serviceability and to detect incipient failure by measuring the mechanical or electrical characteristics of an item and comparing those characteristics with prescribed standards.

*c.* Service. Operations required periodically to keep an item in proper operating condition, i.e., to clean (decontaminate), to preserve, to drain, to paint, or to replenish fuel, lubricants, hydraulic fluids, or compressed air sup plies.

*d.* Adjust. To maintain, within prescribed limits, by bringing into proper or exact position, or by setting the operating characteristics to the specified parameters.

*e. Align.* To adjust specified variable elements of an item to bring about optimum or desired performance.

f. : Calibrate. To determine and cause corrections to be made or to be adjusted on instruments or test measuring and diagnostic equipments used in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.

*g. Install.* The act of emplacing, seating, or fixing into position an item, part, module (component or assembly) in a manner to allow the proper functioning of the equipment or system.

*h.* Replace. The act of substituting a serviceable like type part, subassembly, or module (component or assembly) for an unserviceable counter part.

*i. Repair.* The application of maintenance services (inspect, test, service, adjust, align, calibrate, replace) or other maintenance actions (welding, grinding, riveting, straightening, facing, remachining, or resurfacing) to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly); end item, or system.

*j. Overhaul.* That maintenance effort (service/action) necessary to restore an item to a completely serviceable/operational condition as

prescribed by maintenance standards (i.e., DMWR) in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.

Consists of those services/actions k. Rebuild. the restoration of unserviceable necessary for equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of materiel maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (hours, etc.) considered in classifying miles. Army equipments/components.

### **D-3.** Column Entries

a. Column 1, Group Number. Column 1 lists group numbers, the purpose of which is to identify components, assemblies, subassemblies, and modules with the next higher assembly.

*b.* Column 2, Component/Assembly. Column 2 contains the noun names of components, assemblies, subassemblies, and modules for which maintenance is authorized.

*c.* Column 3, Maintenance Functions. Column 3 lists the functions to be performed on the item listed in column 2. When items are listed without maintenance functions, it is solely for purpose of having the group numbers in the MAC and RPSTL coincide.

d. Column 4, Maintenance Category. Column 4 specifies, by the listing of a "work time" figure in the appropriate subcolumn(s), the lowest level of maintenance authorized to perform the function listed in column 3. This figure represents the active time required to perform that maintenance function at the indicated category of maintenance. If the number of complexity of the tasks within the listed maintenance function vary at different maintenance categories, appropriate "work time" figures will be shown for each category. The number of taskhours specified by the "work time" figure represents the average time required to restore an item (assembly, subassembly, component, module, end item or system) to a serviceable condition under typical field operating conditions. This time includes preparation time, troubleshooting time, and quality assurance/quality control time in addition to the time required to perform the specific tasks identified for functions the maintenance authorized in the maintenance allocation chart. Subcolumns of column 4 are as follows:

C-Operator/Crew O-Organizational F-Direct Support

### H-General Support D-Depot

*e.* Column 5, Tools and Equipment. Column 5 specifies by code, those common tool sets (not individual tools) and special tools, test, and support equipment required to perform the designated function.

*f. Column 6, Remarks.* Column 6 contains an alphabetic code which leads to the remark in section IV, Remarks, which is pertinent to the item opposite the particular code.

### D-4. Tool and Test Equipment Requirements (Sec III)

a. Tool or Test Equipment Reference Code. The numbers in this column coincide with the numbers used in the tools and equipment column of the MAC. The numbers indicate the applicable tool or test equipment for the maintenance functions.

*b. Maintenance Category.* The codes in this column indicate the maintenance category allocated the tool or test equipment.

*c. Nomenclature.* This column lists the noun name and nomenclature of the tools and test equipment required to perform the maintenance functions.

*d. National/NATO Stock Number.* This column lists the National/NATO stock number of the specific tool or test equipment.

e. Tool Number. This column lists the manufacturer's part number of the tool followed by the Federal Supply Code for manufacturers (5-digit) in parentheses.

### D-5. Remarks (Sec. IV)

*a. Reference Code.* This code refers to the appropriate item in section II, column 6.

*b. Remarks.* This column provides the required explanatory information necessary to clarify items appearing in section H.

### APPENDIX E EXPENDABLE SUPPLIES AND MATERIALS LIST

### Section I. INTRODUCTION

### E-1. Scope

This appendix lists expendable supplies and materials you will need to operate and maintain the Control, Radio Set C-6709/G. These items are authorized to you by CTA 50-970, Expendable Items (Except Medical, Class V, Repair Parts, and Heraldic Items).

### E-2. Explanation of Columns

a. Column 1-Item Number. This number is assigned to the entry in the listing and is referenced in the narrative instructions to identify the material (e.g., "Use cleaning compound, item 5, App. D").

*b.* Column 2-Level. This column identifies the lowest level of maintenance that requires the listed item.

C-Operator/Crew

O-Organizational Maintenance

F-Direct Support Maintenance

H-General Support Maintenance

*c.* Column 3-National Stock Number. This is the National stock number assigned to the item; use it to request or requisition the item.

*d.* Column 4-Description. Indicates the Federal item name and, if required, a description to identify the item. The last line for each item indicates the part number followed by the Federal Supply Code for Manufacturer (FSCM) in parentheses, if applicable.

e. Column 5-Unit of Measure (U/M). Indicates the measure used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation (e.g., ea, in, pr). If the unit of measure differs from the unit of issue, requisition the lowest unit of issue that will satisfy your requirements.

### The Metric System and Equivalents

#### Linear Measure

- 1 centimeter = 10 millimeters = .39 inch
- 1 decimeter = 10 centimeters = 3.94 inches
- 1 meter = 10 decimeters = 39.37 inches
- 1 dekameter = 10 meters = 32.8 feet
- 1 hectometer = 10 dekameters = 328.08 feet
- 1 kilometer = 10 hectometers = 3,280.8 feet

### Weights

- 1 centigram = 10 milligrams = .15 grain
- 1 decigram = 10 centigrams = 1.54 grains
- 1 gram = 10 decigram = .035 ounce
- 1 decagram = 10 grams = .35 ounce
- 1 hectogram = 10 decagrams = 3.52 ounces
- 1 kilogram = 10 hectograms = 2.2 pounds
- 1 quintal = 100 kilograms = 220.46 pounds 1 metric ton = 10 quintals = 1.1 short tons

#### Liquid Measure

- 1 centiliter = 10 milliters = .34 fl. ounce 1 deciliter = 10 centiliters = 3.38 fl. ounces
- 1 liter = 10 deciliters = 33.81 fl. ounces
- 1 dekaliter = 10 liters = 2.64 gallons
- 1 hectoliter = 10 dekaliters = 26.42 gallons
- 1 kiloliter = 10 hectoliters = 264.18 gallons

### Square Measure

- 1 sq. centimeter = 100 sq. millimeters = .155 sq. inch
- 1 sq. decimeter = 100 sq. centimeters = 15.5 sq. inches
- 1 sq. meter (centare) = 100 sq. decimeters = 10.76 sq. feet
- 1 sq. dekameter (are) = 100 sq. meters = 1,076.4 sq. feet 1 sq. hectometer (hectare) = 100 sq. dekameters = 2.47 acres
- 1 sq. kilometer = 100 sq. hectometers = .386 sq. mile

#### **Cubic Measure**

1 cu. centimeter = 1000 cu. millimeters = .06 cu. inch 1 cu. decimeter = 1000 cu. centimeters = 61.02 cu. inches 1 cu. meter = 1000 cu. decimeters = 35.31 cu. feet

### **Approximate Conversion Factors**

To change	То	Multiply by	To change	То	Multiply by
inches	centimeters	2.540	ounce-inches	Newton-meters	.007062

This fine document...

Was brought to you by me:

### Liberated Manuals -- free army and government manuals

Why do I do it? I am tired of sleazy CD-ROM sellers, who take publicly available information, slap "watermarks" and other junk on it, and sell it. Those masters of search engine manipulation make sure that their sites that sell free information, come up first in search engines. They did not create it... They did not even scan it... Why should they get your money? Why are not letting you give those free manuals to your friends?

I am setting this document FREE. This document was made by the US Government and is NOT protected by Copyright. Feel free to share, republish, sell and so on.

I am not asking you for donations, fees or handouts. If you can, please provide a link to liberatedmanuals.com, so that free manuals come up first in search engines:

<A HREF=<u>http://www.liberatedmanuals.com/</u>>Free Military and Government Manuals</A>
