HEADQUARTERS, DEPARTMENT OF THE ARMY

14 DECEMBER 1966

SAFETY PRECAUTIONS

Keep hands free from the striker hatch plate and latch when going in or out of the refrigerator.

Disconnect the electrical power before making any repairs to the electrical components.

Be sure inside walk-in door latch is in proper operating condition to prevent personnel from becoming locked inside the refrigerator.

(THIS ITEM IS INCLUDED ON EM 0174)

DISTRIBUTION STATEMENT A: - Approved for public release; distribution is unlimited.

TM 5-4110-204-13, 14 Dec 1966, is updated as follows:

1. File this sheet in front of the manual for reference.
2. This change implements the Army Maintenance Transformation and changes the Maintenance Allocation Chart (MAC) to support Field and Sustainment Maintenance.
3. New or updated text is indicated by a vertical bar in the outer margin of the page.
4. Added illustrations are indicated by a vertical bar adjacent to the figure number.
Changed illustrations are indicated by a miniature pointing hand adjacent to the updated area and a vertical bar adjacent to the figure number.
5. Remove old pages and insert new pages as indicated below:

Remove Pages

C-1 through C-4

DA-2028(Test) Sample

DA-2028 (Test)/Envelope

Insert Pages

A/(B Blank) (before page i)

C-1 through C-8

TM 5-4110-204-13, 14 December 1966, is changed as follows:

The title is changed as shown above.

Page 2 of cover. Add the following warning to the list of safety precautions.

WARNING

The burning of polyurethane foams is dangerous. Due to the chemical composition of a polyurethane foam, toxic fumes are released when it is burned or heated. If it is burned or heated indoors, such as during a welding operation in its proximity, precautions should be taken to adequately ventilate the area. An exhaust system equivalent to that of a paint spray booth should be used. Air supplied respirators, approved by the National Institute for Occupational Safety and Health or the US Bureau of Mines, should be used for all welding in confined spaces and when ventilation is inadequate. Individuals who have chronic or recurrent respiratory conditions, including allergies and asthma, should not be employed in this type of environment.

CHAPTER 1

INTRODUCTION

Section I. GENERAL

1-1. Scope

a. These instructions are published for use by personnel to whom the panel type refrigerator is issued. They provide information on the operation and maintenance of the equipment. Also included are descriptions of main units and their function in relationship to other components.

b. Appendix A contains a list of publications applicable to this manual. Appendix B contains the list of Items Troop Installed or Authorized for use with the equipment. Appendix C contains the maintenance allocation chart. The organizational maintenance repair parts and special tools are listed in appendix D.

c. Numbers in parentheses on illustrations indicate quantity. Numbers preceding nomenclature callouts on illustrations indicate the preferred maintenance sequence.

d. You can improve this manual by recommending improvements using DA Form 2028 (Recommended Changes to Publications and Blank Forms) or DA Form 2028-2 (Recommended Changes to Equipment Technical Manuals) located in the back of the manual and mail the form direct to Commander, US Army Troop Support Command, ATTN: AMSTS-MPP, 4300 Goodfellow Blvd., St. Louis, MO 63120. A reply will be furnished direct to you.

e. To enable timely and effective evaluation, it is important that complete and comprehensive data be submitted on DA Form 2028, including the reason for submission if that fact is not self-evident.

1-2. Record and Report Forms

For record and report forms applicable to operator, crew and organizational maintenance, refer to TM 38-750.

Section II. DESCRIPTION AND DATA

1-3. Description

a. *General.* The prefabricated walk-in refrigerators (fig. 1-1 through 1-4) are assembled from interchangeable panels. There are two types of units: these are Type I and Type II. The Type I refrigerators are 600, 1200, 1800, 3000 and 4000 cubic feet units, while the Type II refrigerators are 400, 600, 800, 1200, 1400, and 1600 cubic feet units. The Type I and Type II refrigerators are of the same construction and differ only in width. The Type I units are three panel or 12 ft. 95/8 in. wide, while the Type II units are two panel or 8 ft. 11 23/32 in. wide. All panels with the exception of the roof and floor panels are interchangeable between the two type refrigerators. All prefabricated refrigerators are constructed in accordance with Military Specifica-

tion MIL-R-10932. The 600 cubic feet Type I unit and 400 and 600 cubic feet Type II units are single units while the units larger than 600 cubic feet are divided into compartments.

The Class 1 panels are constructed of a wooden frame with fiber glass insulation and are covered with sheet aluminum on both sides. The Class 2 panels are the same as Class 1 with exception that the exterior skin is steel and the interior skin is zinc coated, and not painted. The 1800J model refrigerators (Urethane) are constructed similar to the Type I Class 1 refrigerators with the addition of polyurethane foam in place of insulation.

b. *Type I, 600 Cubic Feet Unit.* The Type I, 600 cubic feet unit consists of one walk-in door panel with door, one conveyor panel with door,

NOTE: ROOF AND FLOOR PANELS ARE INTERCHANGEABLE

Figure 1-1. Single compartment refrigerator, right-front, three quarter view, 600 cu. ft. capacity.

one evaporator panel, seven wall panels, four corner panels, three roof and three floor panels. The roof and floor panels are interchangeable throughout each type-size, and wall panels are interchangeable throughout all types and sizes. This refrigerator is equipped with three hardwood floor racks, four shelving units, a thermometer, outside power receptacle, inside light, an outside indicating light and two floor drains.

NOTE

The conveyor panel with door is optional equipment. When not required, this panel is replaced with an additional standard wall.

c. *Type I, 1200 Cubic Feet Unit.* The Type I, 1200 cubic feet unit is a single compartment refrigerator consisting of one walk-in door with ramp and canopy, one conveyor door, two evaporator panels, five roof panels, five floor panels and four corner panels. This unit is equipped with five hardwood floor racks, nine shelving units, a thermometer, outside power receptacle, inside light, outside indicating light and two floor drains.

d. *Type I, 1800 Cubic Feet Unit.* The Type I, 1800 cubic feet unit is a two compartment refrigerator consisting of two walk-in doors, with ramps, and canopies, two conveyor doors, two evaporator panels,

ME 4110-204-13/1-2/

Figure 1-2. Single compartment refrigerator, left-rear, three-quarter view, 600 cu. ft. capacity.

TM 5-4110-204-13

seven roof panels, seven floor panels, four corner panels, and three partition panels. The 1800 cubic foot refrigerator is equipped with six hardwood floor racks, nine shelving units, two thermometers, two

outside power receptacles, two inside lights, two outside indicating lights and four floor drains. The 1800J Model refrigerator (Urethane) is supplied with 14 hardwood floor racks and has no shelving units.

e. *Type I, 3000 Cubic Feet Unit.* The Type I, 3000 cubic feet unit is a three-compartment refrigerator consisting of three walk-in doors with ramps and canopies, three conveyor doors, three evaporator panels, eleven roof panels, eleven floor panels, four corner panels, and six partition panels. The 3000 cubic feet refrigerator contains eleven hardwood floor racks, twenty-one shelving units, three thermometers, three outside power receptacles, three inside lights and four floor drains

f. *Type I, 4000 Cubic Feet Unit.* The Type I, 4000 cubic feet unit is a four-compartment refrigerator consisting of four walk-in doors with ramps and canopies, four conveyor doors, four evaporator panels, fifteen roof panels, twenty-two wall panels and nine partition panels. The 4,000 cubic feet refrigerator is equipped with fifteen hardwood floor racks, thirty shelving units, four thermometers, four outside power receptacles, three inside lights and four floor drains.

g. *Type II, 400 Cubic Feet Unit.* The Type II, 400 cubic feet unit is a single-compartment refrigerator consisting of one walk-in door panel with door, one ramp and canopy, two evaporator panels, five standard wall panels, three floor panels, three ceiling

panels and four corner panels. The 400 cubic feet refrigerator is equipped with three hardwood floor racks, three shelving units, a thermometer, an outside power receptacle, an inside light, an indicating light, and a floor drain.

h. *Type II, 600 Cubic Feet Unit.* The Type II, 600 cubic feet unit is a single-compartment refrigerator consisting of one walk-in door panel with door, one ramp and canopy, two unit cooler panels, seven standard wall panels, four floor panels, four ceiling panels, and four corner panels. The 600 cubic feet refrigerator is equipped with four hardwood floor racks, four shelving units, a thermometer, outside power receptacle, inside light, an indicating light, and two floor drains.

i. *Type II, 800 Cubic Feet Unit.* The Type II, 800 cubic feet unit is a two-compartment refrigerator consisting of two walk-in door panels with doors, two ramps, two canopies, four unit cooler panels, six standard wall panels, five ceiling panels, five floor panels, four corner panels and two partition panels. This 800 cubic feet refrigerator is equipped with five hardwood floor racks, ten shelving units, two thermometers, two outside power recep-

NOTE: ROOF AND FLOOR PANELS ARE INTERCHANGEABLE.

ME 4110-204-13/1-3 C

Figure 1-3. Double compartment refrigerator, right front, three-quarter view.

NOTE: ROOF AND FLOOR PANELS ARE INTERCHANGEABLE.

MEC 4110-204-13/1-4

Figure 1-4. Double compartment refrigerator, left-rear, three-quarter view

tacles, two inside lights, two indicating lights and two floor drains.

j. Type II, 1200 Cubic Feet Unit. The Type II, 1200 cubic feet unit is a three compartment refrigerator consisting of three walk-in door panels with doors, three ramps, three canopies, six unit cooler panels, eight standard wall panels, seven ceiling panels, seven floor panels, four corner panels and six partition panels. This 1200 cubic feet refrigerator is equipped with seven hardwood floor racks, nine shelving units, three thermometers, three outside power receptacles, three inside lights, three indicating lights and two floor drains.

k. Type II, 1400 Cubic Feet Unit. The Type II, 1400 cubic feet unit is a three compartment refrigerator consisting of three walk-in door panels with doors, three ramps, three canopies, six unit cooler panels, ten standard wall panels, eight ceiling panels, eight floor panels, four corner panels and four partition panels. This 1400

cubic feet refrigerator is equipped with eight hardwood floor racks, ten shelving units, three thermometers, three outside power receptacles, three inside lights, three indicating lights and two floor drains.

1. Type II, 1600 Cubic Feet Unit. The Type II, 1600 cubic feet unit is a three compartment refrigerator consisting of three walk-in door panels with doors, three ramps, three canopies, six unit cooler panels, eleven standard wall panels, nine ceiling panels, nine floor panels, four corner panels and four partition panels. This 1600 cubic feet refrigerator is equipped with nine hardwood floor racks, 12 shelving units, three thermometers, three outside power receptacles, three inside lights, three indicating lights and two floor drains.

1-4. Identification and Tabulated Data

a. Identification. An identification plate is mounted on the door of each walk-in door panel. There are from one to four door panels

NOTE: REFER TO FIGURES 4-1 AND 4-2 FOR EACH INDIVIDUAL SIZE REFRIGERATOR TO BE ERECTED.

MFC 4110-204-13/1-5

Figure 1-5. Base Plan, Type I refrigerators

NOTE: REFER TO FIGURES 4-1 AND 4-2 FOR EACH INDIVIDUAL SIZE REFRIGERATOR TO BE ERECTED.

MEC 4110-204-13/14

Figure 1-6. Base plan, Type II refrigerators

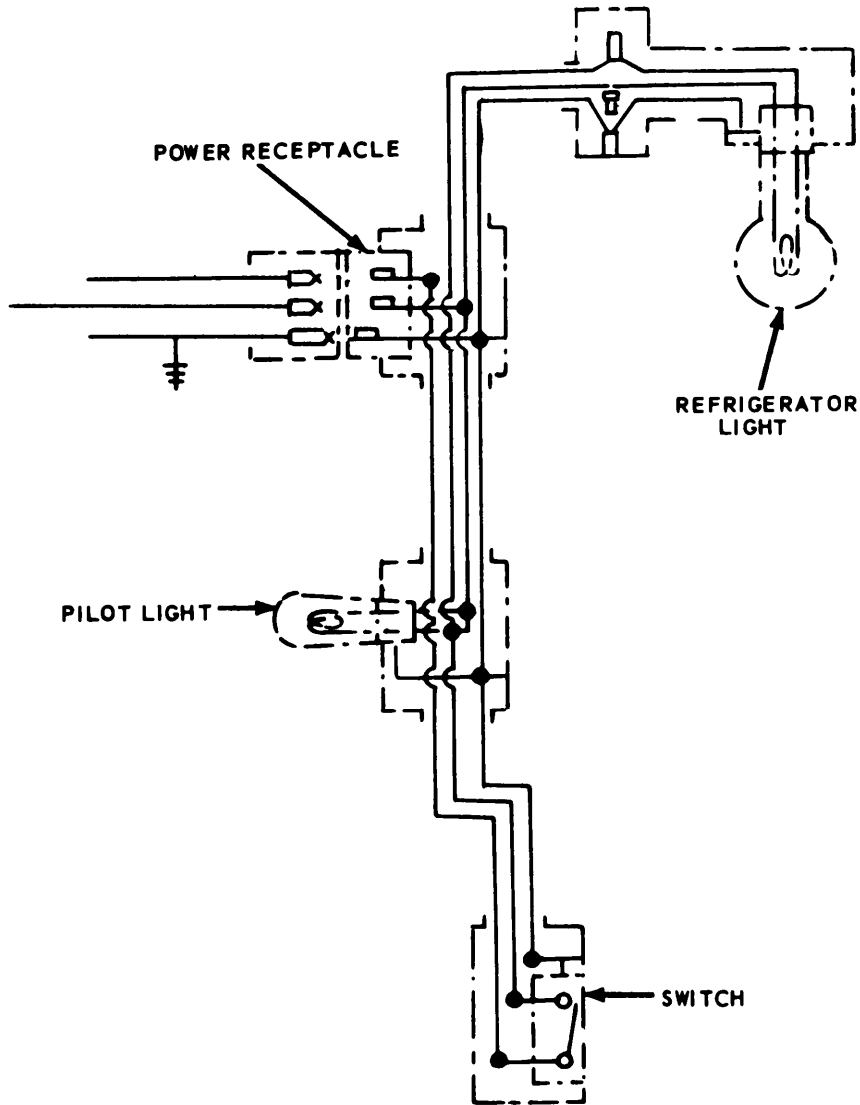

provided with refrigerators, depending on the size. Each identification plate specifies the nomenclature, manufacturer, class, model number and serial number.

b. Tabulated Data.

- (1) General, Due to the fact that this manual covers all sizes of the Type I and Type H refrigerators and that the prefabricated panels from which the units are assembled are manufactured

by numerous manufacturers, (all panels are interchangeable between various manufacturers since they are all made from the same government drawings), the operator, crew or organizational maintenance personnel will refer to the identification plate on the door of the unit for information desired.

- (2) *Base plan.* Refer to figure 1-5 for

MEC 4110-204-13/1-7

Figure 1-7. Practical wiring diagram

the base of the Type I refrigerator, and to figure 1-6 for the base plan for the Type II units.

NOTE

The cribbing used are 8 in. x 8 in. timbers for both the Type I and Type II refrigerators. The width of the base plans remain the same but the length will vary with refrigerator size as shown.

(3) Wiring *diagrams*. Refer to figure 1-7 for a practical wiring diagram.

1-5. Differences in Models

This manual covers the 600-cubic foot, 1200-cu. ft., 1800-cu. ft., 3000-cu. ft., and 4000-cu. ft., Type I, Class I and II refrigerator and the 400-cu. ft., 600-cu. ft., 800-cu. ft., 1200-cu. ft., 1400-cu. ft., and 1600-cu. ft., Type II, Class I refrigerators. The only unit differences are the various sizes as stated above and the design modifications incorporated in the 600-cu. ft., Type I units (FSN 4110-269-5096). In this type unit and the 1800J model (FSN 4110-287-3161), all panel gaskets were attached to the panels with staples, thereby eliminating the gasket retainers and retainer screws used in all other models covered by this manual.

CHAPTER 2 INSTALLATION AND OPERATING INSTRUCTIONS

Section I. SERVICE UPON RECEIPT OF EQUIPMENT

2-1. Unloading the Equipment

a. The crated panels and components of the prefabricated refrigerators may be shipped either by tractor-trailer or rail. The operator and organizational maintenance personnel will remove all tie-down cables, strapping, blocking, and the like, which secure the crated or skid-mounted components to the bed of the carrier. Refer to figure 2-1 and remove all tie-downs and blocking.

b. Use a suitable lifting device of sufficient capacity, and remove the crated or skid-mounted components from the bed of the carrier.

2-2. Unpacking the Refrigerator

Remove banding, crating, and blocking, being extremely careful not to damage the panels. If skid mounted, cut the strapping and remove cushioning and spacers. Unpack separately packed components from the container. Remove tape from drains, switches, and power receptacles.

2-3. Inspecting and Servicing Equipment

a. Inspecting.

(1) Make a complete visual inspection of all component parts of the prefabricated refrigerator for loss of parts or damage which may have occurred during shipment.

(2) Tighten all loose mounting hardware and replace damaged or missing parts. Inspect for a clogged drain strainer. Make certain all latches are in proper working condition.

(3) Before placing any panel in position, make certain all panel hooks rotate freely and are rotated fully counterclockwise. Remove all foreign material from panel fastener recesses and make sure hooks are not damaged or bent. Lubricate as necessary.

b. Servicing.

(1) Perform the quarterly preventive maintenance services (para 3-7).

(2) Lubricate all latches and hinges (para 3-4).

(3) Wipe all moisture from doors and door gaskets.

2-4. Installation and Setting-Up Instructions

a. The refrigerator must be setup on a flat, level surface or platform capable of withstanding 250 pounds per square foot. It is desirable to pick a shaded area to increase the efficiency of the refrigerator.

b. The refrigerator maybe setup inside or outside a shed or building.

c. Set up the refrigerator in the numerical sequence as illustrated in figure 2-2 commencing with a corner panel A. Assembly may commence in both directions, ending with a corner panel A. It may be necessary to remove a corner panel to facilitate installation of the last wall panel B.

d. Fasten the refrigerator panels together as instructed in figure 2-3.

2-5. Installation of Separately Packed Components

a. Install the ramp in its proper location shown in figure 2-2.

b. Install the floor racks in their proper position in the refrigerator.

c. Refer to figure 2-4 and install the light as instructed.

d. Refer to figure 2-4 and install the thermometer as instructed.

e. Install tape over panel joints in figure 1-2. Tape should be installed on roof joints first and then the wall and floor.

Figure 2-1. Blocking and tie-downs.

Figure 2-3. Refrigerator panels, installation

NOTE: STRAIGHTEN THE ELECTRICAL LEADS, POSITION THE WAREHOUSE LIGHT ASSEMBLY ON THE WALK IN DOOR PANEL, AND INSTALL THE SCREW (4).

NOTE: LOOSEN SETSCREW AND UNSCREW THE GUARD, GLOBE, AND LAMP.

NOTE: POSITION THE THERMOMETER ON THE WALK-IN DOOR PANEL AND INSTALL THE SCREW (2).

A. LIGHT ASSEMBLY AND THERMOMETER

NOTE: REMOVE THE SCREW (2) AND PULL DOWN ON THE SOCKET AND GASKET.

B. LAMP SOCKET

NOTE: LOOSEN SCREW (2). ATTACH WIRE (2) AND TIGHTEN SCREWS. REPLACE THE SOCKET, LAMP, GLOBE AND GUARD.

C. LIGHT HEAD

MEC 4110-204-13/2-4

Figure 2-4. Light assembly and thermometer installation

Section II. MOVEMENT TO A NEW WORKSITE

2-6. Dismantling for Movement

- a. Disconnect the external power supply cable.

NOTE

Remove tape from all joints before disassembly of panels.

- b. Refer to figure 2-4 and remove the light assembly in the reverse order of installation.
- c. Refer to figure 2-4 and remove the thermometer in the reverse order of installation.
- d. Refer to figure 2-3 and disconnect the refrigerator panels in the reverse order as shown.
- e. Refer to figure 2-2 and disassemble the refrigerator in the reverse order of assembly.
- f. Crate the components in the original shipping

crates, if available. For short distance, or if original shipping crates are not available, place the components in easily handled loads on skids. Place cushioning material and wooden spacers between surfaces that are easily damaged. Secure the skids with metal banding. Cushion the thermometers with cellulose wadding or other cushioning material. Pack the cushioned items with basic issue items in a suitable fiberboard container.

- g. Refer to paragraph 2-1 and load and secure the refrigerator crates to the bed of the carrier.

2-7. Reinstallation After Movement

Refer to paragraph 2-1 and reinstall the prefabricated refrigerator as instructed.

Section III. CONTROLS AND INSTRUMENTS

2-8. General

This section describes, locates, illustrates, and furnishes the operator, crew, or organizational maintenance personnel sufficient information about the various controls and instruments for proper operation of the prefabricated refrigerator.

tion of the prefabricated refrigerator.

2-9. Controls and Instruments

The purpose of the controls and instruments and the normal and maximum reading of the instruments are illustrated in figure 2-5.

Section IV. OPERATION OF EQUIPMENT

2-10. General

The instructions in this section are published for the information and guidance of the personnel responsible for the operation of the prefabricated refrigerator warehouse.

2-11. Operation Under Usual Conditions

a. After the refrigerator is assembled and the refrigeration unit has been connected, the refrigerator is ready for operation. Refer to the appropriate technical manual covering the cooling unit used and operate the unit as instructed.

b. Observe the thermometer regularly (fig. 2-5) to be sure the desired temperature is maintained.

NOTE

Be sure that the walk-in doors are closed securely when not in use to prevent heat

from entering the refrigerator.

2-12. Operation Under Rainy or Humid Conditions

If the unit is installed outside, protect the hinges and latches by coating them with a waterproof substance, such as grease or heavy oil to prevent rust or corrosion. Use canvas or other water proof material to protect the unit as much as possible in order to reduce the rusting and corrosion action.

2-13. Operation in Salt-water Areas

a. Wash the unit frequently with clean, fresh water.

b. Coat exposed metal surfaces with rust proofing material. Remove rust or corrosion immediately and apply paint and/or oil as applicable.

MEC 4110-204-13 2-5

Figure 2-5. Controls and instruments.

CHAPTER 3

OPERATOR AND ORGANIZATIONAL MAINTENANCE INSTRUCTIONS

Section I. OPERATOR AND ORGANIZATIONAL MAINTENANCE TOOLS AND EQUIPMENT

3-1. Special Tool and Equipment

No special tools or equipment are required by the operator or organizational maintenance personnel for the maintenance of the prefabricated refrigerator warehouse.

3-2. Basic Issue Tools and Equipment

Tools and repair parts issued with or auth-

orized for the prefabricated refrigerator are listed in the basic issue items list, Appendix B of this manual.

3-3. Organizational Maintenance Repair Parts

Organizational maintenance repair parts are listed and illustrated in Appendix D.

Section II. LUBRICATION AND PREVENTIVE MAINTENANCE SERVICES

3-4. Lubrication

The prefabricated refrigerator requires lubrication of the door hinges and latch only. Clean the hinges and latch with an approved cleaning solvent and apply a lightweight oil sparingly as required.

3-5. Preventive Maintenance Services, General

To insure that the prefabricated refrigerator is ready for operation at all times, it must be inspected systematically, so that defects may be discovered and corrected before they result in serious damage or failure. The necessary preventive maintenance services to be performed are listed consecutively and are described in paragraphs 3-6 and 3-7. The item numbers indicate the sequence of minimum inspection requirements. Defects discovered during operation of the unit shall be noted for future correction, to be made as soon as operation has ceased. Stop operation immediately if a deficiency is noted during operation which would damage the equipment if operation were continued. All deficiencies and shortcomings will be recorded together with the corrective action taken on DA Form 2404 (Equipment Inspection and Maintenance Worksheet) at the earliest possible opportunity.

3-6. Daily Preventive Maintenance Services

This paragraph contains an illustrated tabulated listing of preventive maintenance services which must be performed by the operator or crew. The item numbers are listed consecutively and indicate the sequence of minimum requirements. Refer to figure 3-1 for the daily preventive maintenance services.

3-7. Quarterly Preventive Maintenance Services

a. This paragraph contains an illustrated tabulated listing of preventive maintenance services which must be performed by organizational maintenance personnel at quarterly intervals. A quarterly interval is equal to 3 calendar months or 250 hours of operation, whichever occurs first.

b. The item numbers are listed consecutively and indicate the sequence of minimum requirements. Refer to figure 3-2 for the quarterly preventive maintenance services.

3-8. General

The instructions in this section are published for the information and guidance of the operator to maintain the prefabricated refrigerator.

Section III. OPERATORS MAINTENANCE

3-9. Refrigerator Light Lamp

a. *Removal.* Refer to figure 3-3 and remove the refrigerator light lamp.

b. *Installation.* Refer to figure 3-3 and install the refrigerator light lamp.

3-10. Pilot Light Lamp

a. *Removal.* Refer to figure 3-4 and remove the pilot light lamp.

b. *Installation.* Refer to figure 3-4 and install the pilot light lamp.

3-11. General

This section provides information useful in diagnosing and correcting unsatisfactory operation or failure of the refrigerator and its components. Each trouble symptom stated is followed by a list of probable causes of the trouble. The possible remedy recommended is described opposite the probable cause.

NOTE: REMOVE SETSCREW FROM GUARD AND REMOVE GUARD, GLOBE AND LAMP.

MEC 4110-204-13/3-3

Figure 3-3. Refrigerator light lamp, removal and installation

A. COVER

B. LAMP

MEC 4110-204-13/3-4

Figure 3-4. Pilot light lamp, removal and installation

Section IV. TROUBLESHOOTING

3-12. Lights Inoperative

Probable cause	Possible remedy
Defective switch -----	Replace switch (para. 3-19).
Loose wiring connections	Tighten wiring connections and repair wiring.
Defective receptacle _ _ _	Replace receptacle (para. 3-18) .
External power supply _ _	Connect power supply.

3-13. Drains Inoperative

Probable cause	Possible remedy
Clogged drain _ _ _ _ _	Clean drain strainer.
Cap on drain outlet ----	Remove cap from outlet.
Drain pipe clogged _ _ _ _	Remove strainer and clean drain pipe (para. 3-32).

3-14. Refrigerator Does Not Retain Proper Cooling Temperature

Probable cause	Possible remedy
Door striker plate not properly adjusted	Adjust striker latch (para. 3-22) .
Door gasket worn or missing	Replace gasket (para. 3-28) .
Door defective _ _ _ _ _	Replace door (para. 3-21) .
Outside or inside skin damaged	Repair or replace panel (para. 3-30).

Section V. ELECTRICAL COMPONENTS

3-15. General

The electrical components of refrigerator are the inside light, pilot light, light switch, and plug receptacle with the necessary wiring to complete the circuit.

3-16. Refrigerator Light Assembly

a. Removal. Refer to figure 2-4 and remove the refrigerator light assembly.

b. Installation. Refer to figure 2-4 and install the refrigerator light assembly.

3-17. Pilot Light

a. Removal.

- (1) Refer to paragraph 3-10 and remove the pilot light cover.
- (2) Refer to figure 3-5 and remove the pilot light socket.

b. Installation.

- (1) Refer to figure 3-5 and install the pilot light socket.
- (2) Refer to paragraph 3-10 and install the pilot light cover.

3-18. Plug Receptacle

a. Removal. Refer to figure 3-6 and remove the plug receptacle.

b. Installation. Refer to figure 3-6 and install the plug receptacle.

3-19. Light Switch

a. Removal. Refer to figure 3-7 and remove the light switch.

b. Installation. Refer to figure 3-7 and install the light switch.

Figure 3-5. Pilot light, removal and installation

Figure 3-6. Plug receptacle, removal and installation.

Section VI. REFRIGERATOR COMPONENTS

3-20. General

This section provides organizational maintenance personnel with Instruction necessary for maintenance of the refrigerator components which consists of walk-in door panels, conveyor door panels, wall panels, corner panels, floor and roof panels, hardwood floor racks, and the necessary hardware to complete the refrigerator.

3-21. Walk-In Door

a. *Removal.* Refer to figure 3-18, and remove the walk-in door.

b. *Installation.* Refer to figure 3-8 and install the walk-in door.

3-22. Walk-In Door Handles and Latch

a. *Removal.* Refer to figure 3-9, and remove the walk-in door handles and latch.

b. *Installation.* Refer to figure 3-9, and install the walk-in door handles and latch.

c. *Adjustment.* Refer to figure 3-9, and adjust the stirker latch to provide an airtight fit when the door is closed.

3-23. Conveyor Door

a. *Removal.* Refer to figure 3-8, and remove the conveyor door.

b. *Installation.* Refer to figure 3-8, and install the conveyor door.

3-24. Conveyor Door Latch and Handle.

The 1800J model refrigerator conveyor door latch is identical to the walk-in door latch.

a. *Removal.*

(1) Refer to figure 3-10, and remove the conveyor door handle.

(2) Refer to figure 3-11, and remove the conveyor door latch.

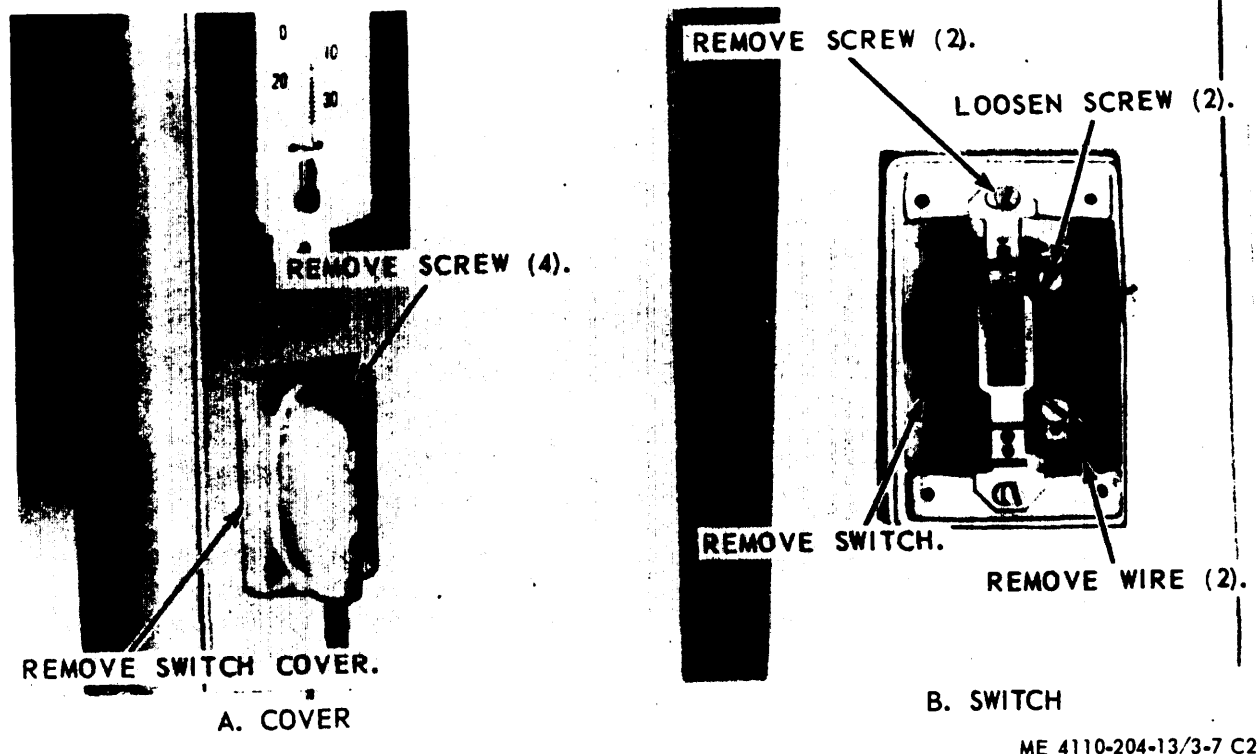

Figure 3-7. Light switch, removal and installation,

b. Installation,

(1) Refer to figure 3-11, and install the conveyor door latch.

(2) Refer to figure 3-10, and install the conveyor door handle.

3-25. Conveyor Door Roller

The 1800J model refrigerator does not have a conveyor door roller.

a. Removal. Refer to figure 3-10, and remove the conveyor door roller.

b. Installation. Refer to figure 3-10, and install the conveyor door rollers.

3-26. Conveyor Door Curtain

a. Removal. Refer to figure 3-10, and remove the conveyor door curtain,

b. Installation. Refer to figure 3-10, and install the conveyor door curtain.

3-27. Conveyor Door Canopy

The 1800J model refrigerator does not have a door canopy.

a. Removal. Refer to figure 3-12, and remove the conveyor door canopy.

b. Installation. Refer to figure 3-12, and install the conveyor door canopy.

NOTE

On the 600-cu. ft., Type I units (FSN 4110-269-5096) and the 1800J unit (FSN 4110-287-3161), all panel gaskets are attached with staples in place of retainers and retainer screws. To remove gaskets, pry out staples with a common screwdriver. Attach new gaskets with staples (0.63 x 1/2 x 5/8 in.) spaced 2 1/2 inches apart.

3-28. Refrigerator Panel and Door Gaskets

a. Removal. Refer to figure 3-13, and remove the panel and door gaskets.

b. Installation. Refer to figure 3-13, and install the panel or door gaskets.

NOTE: OPEN THE DOOR AND USE SUITABLE BLOCKING BEFORE REMOVING DOORS.

NOTE: REMOVE ALL REMAINING WALK-IN DOORS OR CONVEYOR DOORS IN THE SAME MANNER.

ME 4110-204-13 3-9

Figure 3-8. Walk-in and conveyor doors, removal and installation.

3-29. Panel Clamp Assemblies

a. *Removal.* Refer to figure 3-13, and remove the panel clamp assemblies.

b. *Installation.* Refer to figure 3-13, and install the panel clamp assemblies.

3-30. Refrigerator Panels

a. *Removal.* Refer to paragraph 2-6, and remove the refrigerator panels.

NOTE

It is only necessary to remove panels next to the one being replaced. The roof panels may be removed starting at either end. Wall disassembly may start at any corner.

b. *Repair.* When the skin of the panels is cracked, torn, or punctured, thereby exposing the insulation, the refrigerator will not cool properly and must be repaired. Repair the panels as instructed below.

(1) Minor repairs.

(a) Seal minor holes and punctures with sealing compound conforming to specification TT-S-230, Gum Grade, (8030-965-2397)

(b) Minor rips or tears will be repaired by use of repair kit MIL-2-58047(CE) or MIL-R-19907C (2090-372-6064) as follows:

(c) Roughen metal area around damaged area in order to remove paint and improve adherence properties of patching material on panel.

(d) Apply epoxy mixture and patch material from repair kit as specified.

(e) Apply tape over the entire patch area and the panel is ready for use.

(f) For damaged areas up to 144 sq. in., follow above steps for use of repair kit, but apply epoxy to cloth, nylon, or like type material which has been cut to 2 to 3 inches greater in each direction of the hole to be covered.

(g) Affix the patch over the damaged area

(h) Tape the patch in vertical and horizontal directions so that the patch will not move while curing. It will take approximately 2 hours for the patch to adhere properly.

(2) Major Repairs.

(a) Obtain a metal plate large enough to cover the damaged area.

(b) Apply a watertight sealer between the metal plate and the surface of the panel to be repaired.

(c) Press plate tightly against the panel, and secure it with sheet metal screws.

NOTE

If the fiberglass insulation should become saturated with moisture due to leakage of the panel, the panel should be removed and the moisture baked out of it. If the

panel is too saturated to dry out, the insulation must be replaced in the panel.

The 1800J model refrigerator has polyurethane insulation.

c. *Installation* Refer to paragraph 2-4, and install the refrigerator panels.

3-31. Thermometer

a. *Removal.* Refer to paragraph 2-5, and remove the thermometer from the door panel.

b. *Installation* Refer to paragraph 2-5 and install the thermometer on the door panel.

3-32. Drain Strainer

a. *Removal.* Refer to figure 3-14, and remove the drain strainer.

b. *Installation.* Refer to figure 3-14, and install the drain strainer.

3-33. Slide Bolts

a. *Removal.* Remove the four screws that secure the slide bolts to the partition panels, and remove the slide bolts.

b. *Installation* Position the slide bolts on the partition panels, and secure them with four mounting screws.

NOTE: REMOVE SCREW (2) AND INSIDE HANDLE IN THE SAME MANNER.

A. HANDLES AND STRIKER LATCH

NOTE: LOOSEN THE LOCKSCREW AND TURN ADJUSTMENT SCREW TO ADJUST THE STRIKER LATCH. AFTER ADJUSTMENT, TIGHTEN THE LOCKSCREW.

B. ADJUSTMENT

CHAPTER 4

DIRECT SUPPORT MAINTENANCE INSTRUCTIONS

Section I. GENERAL

4-1. Scope

a. These instructions are published for the use of direct support maintenance personnel maintaining the panel type prefabricated refrigerator. They provide information on the maintenance of the equipment, which is beyond the scope of the tools, equipment, personnel, or supplies normally available to using organizations.

b. Report all equipment improvements recommendations as prescribed by TM 38-750.

4-2. Record and Report Forms

For record and report forms applicable to direct support maintenance, refer to TM 38-750.

Note. Applicable forms, excluding Standard Form 46 which is carried by the operator, shall be kept in a canvas bag mounted on the equipment.

Section II. DESCRIPTION AND TABULATED DATA

4-3. Description

For a complete description of the prefabricated refrigerator see paragraph 1-3.

4-4. Tabulated Data

a. General. This paragraph contains the time standards and list of components necessary for construction of the various size refrigerators. Refer to paragraph 1-4 for general tabulated data.

b. *The Standards.* Table 4-1 lists the number of man-hours required under normal conditions for various operations in the maintenance and repair of the prefabricated refrigerators. The man-hours listed are not intended to be rigid standards. Under adverse conditions, the operation will take considerable longer; but under ideal conditions with highly skilled mechanics, most of the operations can be accomplished in considerably less time.

Table 4-1. Time Standards

Removal and Replacement ITEMS	Hours	
22 BODY CHASSIS OR HULL, AND ACCESSORY		600 cu ft Unit 8.0
ITEMS		1200 cu ft Unit 16.0
2210 Data Plates		1800 cu ft Unit 24.0
Plates, data	0.2	3000 cu ft Unit 40.0
Plates, instruction	0.2	4000 cu ft Unit 51.4

Lamp	0.9	Canopy	2.9
(Includes removal and installation of guard and cover).		(Includes removal and installation of panels).	
Cover	0.02	Ramp	0.06
(Includes removal and installation of guard).		c. Refrigerator Component Data. Tables 4-2 and 4-3 list the type and number of panels and other components necessary for construction of all sizes of the Type I and Type II, Class I refrigerators. Refer to figures 4-1 and 4-2 for nomenclature identifier callouts listed in the tables.	
Gasket	0.4		
(Includes removal and installation of guard, cover and fittings).			
Power receptacle assembly	0.4		
(Includes removal and installation of guard, cover gasket and wiring).			
Cover and gasket	0.2		
(Includes removal and installation of guard).			
Guard, power receptacle	0.2		
(Includes removal and installation of chain).			
Thermometer	0.2		
Strainer assembly	1.8		
(Includes removal and installation of plug).			

NOTE

The ramp and conveyor panel with door are optional. When not required, the conveyor panel with door is replaced by a standard wall panel. The 1800J Model Refrigerator is similar to the Type I, Class I refrigerator. For the 1800J unit, the ramp, conveyor panel, and J Panel are optional; and when the conveyor panel is required, it replaces other standard wall panels.

CHAPTER 5

GENERAL MAINTENANCE INSTRUCTIONS

Section I. SPECIAL TOOLS AND EQUIPMENT

5-1. Special Tools and Equipment

There are no special tools or equipment necessary to perform direct support maintenance on the panel type prefabricated refrigerators.

5-2. Direct Support Maintenance Repair Parts

Direct support maintenance repair parts are

listed and illustrated in Appendix D of this manual.

5-3. Specially Designed Tools and Equipment

There are no specially designed tools or equipment necessary to perform direct support maintenance on the panel type prefabricated refrigerator.

Section II. DIRECT SUPPORT MAINTENANCE INSTRUCTIONS

5-4. General

Direct support maintenance personnel are responsible for replacement of the prefabricated refrigerators when it becomes necessary that the entire units be replaced. Replacement of the data plates which are located on the walk-in doors is also a responsibility of direct support maintenance.

5-5. Prefabricated Refrigerator

a. Removal. Refer to paragraphs 3-30 and 2-6 and remove all ceiling panels, walk-in door panels, conveyor door panels, evaporator panels, corner panels and floor panels.

b. Installation. Refer to paragraphs 3-30 and 2-4 and install all floor panels, corner panels, evaporator panels, conveyor door panels, walk-in door panels and ceiling panels.

APPENDIX B

BASIC ISSUE ITEMS LIST AND ITEMS TROOP INSTALLED OR AUTHORIZED

Section I. INTRODUCTION

B-1. Scope

This appendix lists items required by the operator for operation of the refrigerator.

B-2. General

This list is divided into the following sections

a. Basic Issue Items List-Section II. Not applicable.

b. Items Troop Installed or Authorized List-Section III. A list of items in alphabetical sequence, which at the discretion of the unit commander may accompany the refrigerator. These items are NOT SUBJECT TO TURN-IN with the refrigerator when evacuated.

B-3. Explanation of Columns

The following provides an explanation of columns in the tabular list of Basic Issue Items List, Sec-

tion II, and Items Troop Installed or Authorized, Section III.

a. Source, Maintenance and Recoverability Code (SMR). Not applicable.

b. Federal Stock Number. This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. Description. This column indicates the Federal item name and any additional description of the item required.

d. Unit of Measure (WM). A two character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based, e.g., ft, ea, pr, etc.

e. Quantify Furnished with Equipment (BILL). Not applicable.

f. Quantify Authorized (Items Troop Installed or Authorized). This column indicates the quantity of the item authorized to be used with the equipment.

APPENDIX C

Section I. INTRODUCTION

The Army Maintenance System MAC

This introduction provides a general explanation of all maintenance and repair functions authorized at the two maintenance levels under the Two-Level Maintenance System concept.

The MAC (immediately following the introduction) designates overall authority and responsibility for the performance of maintenance functions on the identified end item or component. The application of the maintenance functions to the end item or component shall be consistent with the capacities and capabilities of the designated maintenance levels, which are shown on the MAC in column (4) as:

Field - includes two columns, Unit maintenance and Direct Support maintenance. The Unit maintenance column is divided again into two more subcolumns, C for Operator or Crew and O for Unit maintenance.

Sustainment – includes two subcolumns, General Support (H) and Depot (D)

The tools and test equipment requirements (immediately following the MAC) list the tools and test equipment (both special tools and common tool sets) required for each maintenance function as referenced from the MAC. The remarks (immediately following the tools and test equipment requirements) contain supplemental instructions and explanatory notes for a particular maintenance function.

Maintenance Functions

Maintenance functions are limited to and defined as follows:

1. Inspect. To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination (e.g., by sight, sound, or feel.) This includes scheduled inspection and gagings and evaluation of cannon tubes.
2. Test. To verify serviceability by measuring the mechanical, pneumatic, hydraulic, or electrical characteristics of an item and comparing those characteristics with prescribed standards on a scheduled basis, i.e., load testing of lift devices and hydrostatic testing of pressure hoses.
3. Service. Operations required periodically to keep an item in proper operating condition, e.g. to clean (includes decontaminate, when required), to preserve, to drain, to paint, or to replenish fuel, lubricants, chemical fluids, or gases. This includes scheduled exercising and purging of recoil mechanisms. The following are examples of service functions:
 - a. Unpack. To remove from packing box for service or when required for the performance of maintenance operations.
 - b. Repack. To return item to packing box after service and other maintenance operations.
 - c. Clean. To rid the item of contamination.

- d. Touch up. To spot paint scratched or blistered surfaces.
- e. Mark. To restore obliterated identification.
- 4. Adjust. To maintain or regulate, within prescribed limits, by bringing into proper or position, or by setting the operating characteristics to specified parameters.
- 5. Align. To adjust specified variable elements of an item to bring about optimum or desired performance
- 6. Calibrate. To determine and cause corrections to be made or to be adjusted on instruments of test, measuring, and diagnostic equipment used in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.
- 7. Remove/install. To remove and install the same item when required to perform service or other maintenance functions. Install may be the act of emplacing, seating, or fixing into position a spare, repair part, or module (component or assembly) in a manner to allow the proper functioning of an equipment or system.
- 8. Paint. To prepare and spray color coats of paint so that the ammunition can be identified and protected. The color indicating primary use is applied, preferably, to the entire exterior surface as the background color of the item. Other markings are to be repainted as original so as to retain proper ammunition identification.
- 9. Replace. To remove an unserviceable item and install a serviceable counterpart in its place. "Replace" is authorized by the MAC and assigned maintenance level is shown as the third position code of the Source, Maintenance and Recoverability (SMR) code.
- 10. Repair. The application of maintenance services, including fault location/troubleshooting, removal/installation, disassembly/assembly procedures and maintenance actions to identify troubles and restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.

NOTE

The following definitions are applicable to the "repair" maintenance function:

Services. Inspect, test, service, adjust, align, calibrate, and/or replace.

Fault location/troubleshooting. The process of investigating and detecting the cause of equipment malfunctioning; the act of isolating a fault within a system or Unit Under Test (UUT).

Disassembly/assembly. The step by step breakdown (taking apart) of a spare/functional group coded item to the level of its least component, that is assigned an SMR code for the level of maintenance under consideration (i.e. identified as maintenance significant).

Actions. Welding, grinding, riveting, straightening, facing, machining, and/or resurfacing.

11. Overhaul. That maintenance effort (service/action) prescribed to restore an item to a completely serviceable/operational condition as required by maintenance standards in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.
12. Rebuild. Consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of material maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (e.g., hours/miles) considered in classifying Army equipment/components.

Explanation of Columns in the MAC

Column (1) Group Number. Column (1) lists Functional Group Code (FGC) numbers, the purpose of which is to identify maintenance significant components, assemblies, subassemblies, and modules with the Next Higher Assembly (NHA).

Column (2) Component/Assembly. Column (2) contains the item names of components, assemblies, subassemblies, and modules for which maintenance is authorized.

Column (3) Maintenance Function. Column (3) lists the functions to be performed on the item listed in column (2). (For a detailed explanation of these functions refer to "Maintenance Functions" outlined above).

Column (4) Maintenance Level. Column (4) specifies each level of maintenance authorized to perform each function listed in column (3), by indicating work time required (expressed as manhours in whole hours or decimals) in the appropriate subcolumn. This work time figure represents the active time required to perform that maintenance function at the indicated level of maintenance. If the number or complexity of the tasks within the listed maintenance function varies at different maintenance levels, appropriate work time figures are to be shown for each level. The work time figure represents the average time required to restore an item (assembly, subassembly, component, module, end item, or system) to a serviceable condition under typical field operating conditions. This time includes preparation time (including any necessary disassembly/assembly time), troubleshooting/fault location time, and quality assurance time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the MAC. The symbol designations for the various maintenance levels are as follows:

Field:

- C Operator or Crew maintenance
- O Unit maintenance
- F Direct Support maintenance

Sustainment:

- L Specialized Repair Activity
- H General Support maintenance
- D Depot maintenance

NOTE

The "L" maintenance level is not included in column (4) of the MAC. Functions to this level of maintenance are identified by work time figure in the "H" column of column (4), and an associated reference code is used in the REMARKS column (6). This code is keyed to the remarks and the SRA complete repair application is explained there.

Column (5) Tools and Equipment Reference Code. Column (5) specifies, by code, those common tool sets (not individual tools), common Test, Measurement and Diagnostic Equipment (TMDE), and special tools, special TMDE, and support special equipment required to perform the designated function. Codes are keyed to the entries in the tools and test equipment table.

Column (6) Remarks Code. When applicable, this column contains a letter code, in alphabetic order, which is keyed to the remarks table entries.

Explanation of Columns in the Tools and Test Equipment Requirements

Column (1) – Tool or Test Equipment Reference Code. The tool or test equipment reference code correlates with a code used in column (5) of the MAC.

Column (2) – Maintenance Level. The lowest level of maintenance authorized to use the tool or test equipment.

Column (3) – Nomenclature. Name or identification of the tool or test equipment.

Column (4) – National Stock Number (NSN). The NSN of the tool or test equipment.

Column (5) – Tool Number. The manufacturer's part number.

Explanation of Columns in Remarks

Column (1) – Remarks Code. The code recorded in column (6) of the MAC.

Column (2) – Remarks. This column lists information pertinent to the maintenance function being performed as indicated in the MAC."

APPENDIX D

REPAIR PARTS LIST

Section I. INTRODUCTION

D-1. Scope.

This index contains a list of repair parts and equipment required for the performance of organizational and direct support maintenance of the prefabricated refrigerator.

D-2. General.

This repair parts and special tools list is divided into three principal sections and a National stock number index.

a. *Section II: Prescribed Load Allowance List (PLA).* A consolidated listing of repair parts quantitatively allocated for initial stockage at the organizational level. This is a mandatory minimum stockage allowance.

b. *Section III: Repair Parts List.* A list of repair parts authorized for the performance of maintenance at organizational level.

c. *Section IV: Repair Parts List.* A list of repair parts authorized for the performance of maintenance at the direct support level.

d. Allowances are based on 5,000 hours operation per year.

e. Part I applies to all models. Part II applies to type I models only. Part III applies to type H models only.

D-3. Explanation of Columns.

The following provides an explanation of columns in the tabular lists.

a. Source, Maintenance, and Recoverability Codes.

- (1) Source code indicates the selection status and source for the listed item. Source Codes used are:

Code	Explanation
P	Applied to repair parts which are stocked in or supplied from DSA/GSA or Army supply system, and authorized for use at indicated maintenance categories.

M Applied to repair parts which are not procured or stocked but are to be manufactured at indicated maintenance categories.

X2 Applied to repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain them through cannibalization; if not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels.

c Applied to repair parts authorized for local procurement. If not obtainable from local procurement, such repair parts will be requisitioned through normal supply channels with a supporting statement of nonavailability from local procurement.

- (2) Maintenance code indicates the lowest category of maintenance authorized to maintain the listed item. The maintenance level codes are:

Code	Explanation
------	-------------

o Organizational Maintenance

F Direct Support Maintenance

- (3) Recoverability code indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are expendable.

b. National stock number indicates the National stock number for the item.

c. Description indicates the Federal item name and a brief description of the item. A five-digit manufacturer's or other service code, and part number is included in parentheses for reference. Repair parts quantities included in the kits, sets, and assemblies are shown in front of the repair part name.

d. Unit of issue indicates the unit used as a basis of issue, e.g., ea, pr, ft, yd, etc.

e. Quantity incorporated in unit pack indicates the actual quantity contained in the unit pack.

f. Quantity incorporated in unit indicates the quantity of repair parts in an assembly. Where an asterisk appears, refer to Table 4—2 and figures 4—1 and 4—2 for quantities applicable to a particular model.

g. Fifteen-Day organizational maintenance allowance.

- (1) The allowance columns are divided into four subcolumns. Indicated in each subcolumn is the quantity of items authorized for the number of equipments supported. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.
- (2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period, for the number of equipments supported. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the appropriate density column to obtain the total quantity of repair parts authorized.
- (3) Subsequent changes to allowances will be limited as follows: No change in the range of items is authorized. If additional items are considered necessary, recommendation should be forwarded to US Army Troop Support and Aviation Materiel Readiness Command for exception or revision to the allowance list. The range of items authorized will be made by this Command based upon engineering experience, demand data, or TAERS information.

h. *Thirty-Day DS Maintenance Allowance.*

- (1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn is the total quantity of items authorized for the number of equipments supported. Items authorized for use as required but not for initial stockage are

identified with an asterisk in the allowance column.

- (2) The quantitative allowances for DS level of maintenance will represent initial stockage for a 30-day period for the number of equipments supported.

i. *Illustration.*

- (1) Figure number indicates the figure number of the illustration by which the item is shown.
- (2) Item or symbol number indicates the callout number used to reference the item in the illustration.

D-4. Special Information.

Quantity shown in quantity incorporated in unit reflects total for all units. Refer to figures 4—1 and 4—2 for quantity of specific unit.

D-5. How to Locate Repair Parts.

a. *When National stock number is unknown.*

- (1) *First.* Using the index of contents, determine the functional group or subgroup, i.e., engine, engine assembly, transmission, transmission assembly, within which the repair part belongs. This is necessary because separate illustrations are prepared for functional groups or subgroups, and listings are divided into functional groups.
- (2) *Second.* Find the repair part illustration in the back of the publication covering the functional group or subgroup to which the repair part belongs.
- (3) *Third.* Identify the repair part on the illustration figure and item number of the repair part.
- (4) *Fourth.* Using the repair parts listing, find the functional group or subgroup of the repair part and the illustration figure and item number as noted on the illustration.

b. *When National stock number or manufacturer's part number is known.*

- (1) *First.* Use the index to locate the National stock number or manufacturer's

er's part number. This index is arranged in alphanumeric sequence cross-referenced to page number and manufacturer's code.

(2) Second. Refer to the appropriate page in the parts listing. Locate the functional group or subgroup of the repair part and the illustration figure and item number as indicated in the last two columns of the parts listing.

D-6. Abbreviations

dia	diameter
ea	each
ft	foot (feet)
id.	inside diameter
in	inch(es)
lg.	long (length)
No	number(s)

net	National Pipe Thread
the	thickness)
v	volt(s)
w	watt(s)
w	wide (width)

D-7. Federal Supply Codes

INDEX

	Paragraph	Page
Basic issue tools and equipment _____	3-2	3-1
Controls and instruments:		
Controls and instruments _____	2-9	2-6
General _____	2-8	2-6
Conveyor door _____	3-23	3-7
Conveyor door curtain _____	3-26	3-8
Conveyor door canopy _____	3-27	3-8
Conveyor door latch and handle _____	3-24	3-7
Conveyor door roller _____	3-25	3-8
Daily preventive maintenance _____	3-6	3-1
Data, tabulated _____	1-4, 4-4	1-5, 4-1
Description _____	1-3	1-1
Description and data:		
Description _____	1-3, 4-3	1-1, 4-1
Differences in models _____	1-5	1-9
Identification and tabulated data _____	1-4	1-5
Differences in models _____	1-6	1-9
Direct support maintenance repair parts _____	5-2	5-1
Dismantling for movement _____	2-6	2-6
Drains inoperative _____	3-13	3-6
Drain strainer _____	3-32	3-10
Electrical components:		
General _____	3-15	3-6
Light switch _____	3-19	3-6
Pilot light _____	3-17	3-6
Plug receptacle _____	3-18	3-6
Refrigerator light assembly _____	3-16	3-6
General:		
Controls and instruments _____	2-8	2-6
Direct support maintenance and instructions _____	5-4	5-1
Electrical components _____	3-15	3-6
Operation of equipment _____	2-10	2-6
Operators maintenance _____	3-8	3-1
Refrigerator components _____	3-20	3-7
Troubleshooting _____	3-11	3-5
Identification and tabulated data _____	1-4	3-5
Inspecting and servicing equipment _____	2-3	2-1
Installation and setting-up instructions _____	2-4	2-1
Installation of separately packed components _____	2-5	2-1
Light inoperative _____	3-12	3-6
Light switch _____	3-19	3-6
Lubrication _____	3-4	3-1
Lubrication and preventive maintenance services:		
Daily preventive maintenance services _____	3-6	3-1
Lubrication _____	3-4	3-1
Preventive maintenance services, general _____	3-5	3-1
Quarterly preventive maintenance services _____	3-7	3-1
Movement to anew worksite:		
Dismantling for movement _____	2-6	2-6
Reinstallation after movement _____	2-7	2-6

	Paragraph	Page
Operation in a salt water area	2-18	2-6
Operation of equipment:		
General	2-10	2-6
Operation in a saltwater area	2-13	2-6
Operation under rainy or humid conditions	2-12	2-6
Operation under usual conditions	2-11	2-6
Operation under rainy or humid conditions	2-12	2-6
operation under usual conditions	2-11	2-6
Operator and organizational maintenance tools and equipment:		
Basic issue tools and equipment	3-2	3-1
Organizational maintenance repair parts	3-3	3-1
Special tools and equipment	3-1	3-1
Operators maintenance:		
General	3-8	3-1
Pilot light lamp	3-10	3-5
Refrigerator light lamp	3-9	8-6
Organizational maintenance repair parts	3-3	8-1
Panel clamp assemblies	3-29	3-8
Pilot light	3-17	3-8
Pilot light lamp	3-10	3-8
Plug receptacle	3-18	3-8
Prefabricated refrigerator	5-5	5-1
Preventive maintenance services, general	8-6	3-1
Quarterly preventive maintenance services	8-7	3-1
Record and report form	1-2, 4-2	1-1, 4-1
Refrigerator components:		
Conveyor door	3-23	3-7
Conveyor door canopy	3-27	3-8
Conveyor door curtains	3-26	3-8
Conveyor door latch and handle	3-24	3-7
Conveyor door roller	3-25	3-8
Drain strainer	3-32	3-10
General	3-20	3-7
Panel clamp assemblies	3-29	3-8
Refrigerator panels and door seals	3-28	3-8
Refrigerator panels	3-30	3-8
Slide bolts	3-33	3-10
Thermometer	3-31	3-10
Walk-in door	3-21	3-7
Walk-in door handles and latch	3-22	3-7
Refrigerator light assembly	3-16	3-6
Refrigerator light lamp	3-9	3-5
Refrigerator panel and door zeals	3-28	3-8
Refrigerator panels	3-30	3-8
Refrigerator, Prefabricated	5-5	6-1
Reinstallation after movement	2-7	2-6
Repair parts, direct support maintenance	5-2	5-1
Rapair parts, organizational maintenance	3-3	3-1
scope	1-4, 4-1	1-5, 4-1
Service upon receipt of equipment:		
Inspecting and servicing equipment	2-3	2-1
Installation and setting-up instructions	2-4	2-1
Installation of separately pack components	2-5	2-1
Unloading the equipment	2-1	2-1
Unpacking the refrigerator	2-2	2-1
Slide bolts	3-33	3-10
Specially designed tools and equipment	5-3	5-1
Special tools and equipment	3-1, 5-1	3-1, 5-1

	Paragraph	Page
Tabulated data -----	1-4	1-5
Thermometer -----	3-31	8-10
Troubleshooting:		
Drain inoperative -----	3-13	3-6
General -----	3-11	3-5
Light inoperative -----	3-12	3 - 6
Walk-in and conveyor door not closing properly -----	3-14	3-6
Unloading the equipment -----	2 - 1	2-1
Unpacking the refrigerator -----	2 - 2	2-1

THE METRIC SYSTEM AND EQUIVALENTS

LENGTH MEASURE

1 Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches
 1 Meter = 100 Centimeters = 1000 Millimeters = 39.37 Inches
 1 Kilometer = 1000 Meters = 0.621 Miles

WEIGHTS

1 Gram = 0.001 Kilograms = 1000 Milligrams = 0.035 Ounces
 1 Kilogram = 1000 Grams = 2.2 lb.
 1 Metric Ton = 1000 Kilograms = 1 Megagram = 1.1 Short Tons

LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces
 1 Liter = 1000 Milliliters = 33.82 Fluid Ounces

SQUARE MEASURE

1 Sq. Centimeter = 100 Sq. Millimeters = 0.155 Sq. Inches
 1 Sq. Meter = 10,000 Sq. Centimeters = 10.76 Sq. Feet
 1 Sq. Kilometer = 1,000,000 Sq. Meters = 0.386 Sq. Miles

CUBIC MEASURE

1 Cu. Centimeter = 1000 Cu. Millimeters = 0.06 Cu. Inches
 1 Cu. Meter = 1,000,000 Cu. Centimeters = 35.31 Cu. Feet

TEMPERATURE

$5/9(^{\circ}\text{F} - 32) = ^{\circ}\text{C}$
 212° Fahrenheit is equivalent to 100° Celsius
 90° Fahrenheit is equivalent to 32.2° Celsius
 32° Fahrenheit is equivalent to 0° Celsius
 $9/5^{\circ}\text{C} + 32 = ^{\circ}\text{F}$

This fine document...

Was brought to you by me:

[Liberated Manuals -- free army and government manuals](#)

Why do I do it? I am tired of sleazy CD-ROM sellers, who take publicly available information, slap “watermarks” and other junk on it, and sell it. Those masters of search engine manipulation make sure that their sites that sell free information, come up first in search engines. They did not create it... They did not even scan it... Why should they get your money? Why are not letting you give those free manuals to your friends?

I am setting this document FREE. This document was made by the US Government and is NOT protected by Copyright. Feel free to share, republish, sell and so on.

I am not asking you for donations, fees or handouts. If you can, please provide a link to liberatedmanuals.com, so that free manuals come up first in search engines:
